Ausserkraftsetzung vorbestehender Spezifikationen

Folgende vorbestehende Spezifikationen werden mit Genehmigung der vorliegenden Spezifikation ausser Kraft gesetzt:

- [CDA-CH V1.2 vom 27. Januar 2009](#)
- [CDA-CH II V1.2 vom 01. Oktober 2011](#)

Zweck und Positionierung

Das vorliegende Dokument definiert den technischen und semantischen Standard für den elektronischen und strukturierten Austausch der beschriebenen Informationen rund um das elektronische Patientendossier (EPD).

Gleichstellung von Mann und Frau

Im Interesse einer besseren Lesbarkeit wird auf die konsequente gemeinsame Nennung der männlichen und weiblichen Form verzichtet. Wo nicht anders angegeben, sind immer beide Geschlechter gemeint.

Elektronische Version

Die Inhalte dieses Dokuments können auch auf dem [Wiki](#) abgerufen werden.

Die normative Spezifikation inklusive den Schematron-Regeln ist auf [Art-Decor](#) publiziert.

1 Zusammenfassung

Ein Patient durchläuft während einer Behandlung in der Regel mehrere, oft sogar zahlreiche Institutionen. Auf dem Behandlungspfad eines Patienten werden zahlreiche medizinische Dokumente ausgetauscht. Ein isolierter Betrieb von Informationssystemen führt nebst Mehrfacherfassungen, Medienbrüchen und anderen negativen Begleiterscheinungen vor allem zu unnötigem personellen Aufwand. Oft wird auch heute noch das Papier als Medium und der Patient als Kurier eingesetzt. Mit den heute verfügbaren Mitteln der Informations- und Kommunikationstechnologie (ICT) sind demgegenüber wesentliche Verbesserungen möglich.

Beispiele:

- Automatische Verteilung der Dokumente aufgrund der, im Dokumentenkopf genannten Empfänger
- Elektronische Verarbeitung der Nutzdaten
 - Sendende Informationssysteme können Inhalte aus deren Datenbeständen automatisch generieren
 - Empfangende Informationssysteme können ihre Datenbestände aus elektronisch erhaltenen Dokumenten automatisch nachführen
 - Alarmierungen oder Workflows können bei Bedarf initialisiert werden

Um einen einheitlichen, ökonomisch vertretbaren Einsatz des elektronischen Austausches medizinischer Dokumente zu ermöglichen, ist der Einsatz von Standards notwendig. Dadurch wird sichergestellt, dass mehrere in sich autonome Systeme und Organisationen ohne vorherige Absprachen miteinander kommunizieren können. CDA-CH ist genau dazu etabliert worden und soll als Instrument dienen, die Interoperabilität zwischen Leistungserbringern im schweizerischen Gesundheitswesen erhöhen. CDA-CH V2 (2017) bietet eine Konformität zu eCH Normen für Postadresse und Personendaten, sowie zum EPDG (Anhang 3: Metadaten und Anhang 4: Austauschformate). Damit wird sichergestellt, dass CDA-CH V2 Dokumente optimal in Prozesse rund ums elektronische Patientendossier (EPD) integriert werden können. Der Einsatz im EPD ist allerdings nur eines von zahlreichen Szenarien für den Einsatz von CDA-CH V2. CDA-CH V2 kann und wird auch ausserhalb des EPD eingesetzt werden.

2 Einleitung

2.1 Ausgangslage und Motivation

Die Grundlage für die Austauschformate in der Schweiz bildet die CDA-CH Spezifikation. Diese wurde im 2009 etabliert und seither nicht mehr aktualisiert. Die vorliegende Überarbeitung dient insbesondere der Anpassung an Vorgaben aus dem [Gesetz zum elektronischen Patientendossier](#). Ausserdem wurden auch Vorgaben von eCH Standards zu Adressen und Personendaten berücksichtigt.

Der im Steuerungsausschuss von „eHealth Suisse“ verabschiedete Umsetzungsvorschlag sieht ein einheitliches Austauschformat für die hier genannten Informationen vor. Damit kann der Austausch dieser Informationen zwischen allen beteiligten Institutionen und Personen unterstützt werden. Dokumente, welche nach diesem Austauschformat erstellt werden, sind ausserdem geeignet für die Ablage im EPD.

2.2 Status und Zweck des Dokuments

Das vorliegende Dokument beschreibt den Inhalt von „CDA-CH 2017 (specification)“ und definiert damit ein einheitliches Austauschformat für den Informationsaustausch im Gesundheitswesen Schweiz. Es enthält den Text wie er vom Projektteam erarbeitet wurde und beinhaltet die normative Spezifikation basierend auf HL7 CDA. Dieses Austauschformat ist nach einer breiten Anhörung als nationaler Standard durch eHealth Suisse zur Verwendung empfohlen.

2.3 Angesprochene Leserschaft

Das vorliegende Austauschformat richtet sich an Behandelnde, Hersteller und Lieferanten von Software und Systemen sowie alle weiteren Gesundheitsfachpersonen, welche sich mit vorliegendem Thema befassen.

ICT-Fachleute finden im Kapitel "7 Spezifikation (normativ)" die normative Spezifikation und im Kapitel "8 Validierung, Technologien und Tools" Verweise auf Dokumente zu Technologien und Tools zur Validierung sowie weitere Hilfsunterlagen (sogenannte „Supporting Documents“). Eine Beschreibung der Anwendungsfälle findet sich in Kapitel "5 Anwendungsfälle".

2.4 Ziele und Abgrenzungen

2.4.1 Interoperabilität als Voraussetzung

Eine sinnvolle Umsetzung elektronischer Meldungen bedingt Interoperabilität der beteiligten Systeme. Die "HL7 EHR Interoperability Work Group" hat Interoperabilität unterteilt in folgende Stufen^[Anmerkung 1].

- Technische Interoperabilität
- Semantische Interoperabilität
- Prozessinteroperabilität

Technisch interoperabel sind Systeme, die miteinander Daten austauschen können. Semantische Interoperabilität bedeutet, dass die Information vom empfangenen System richtig interpretiert werden kann. Die Prozessinteroperabilität befasst sich mit der Integration der Systeme in den Arbeitsablauf.

Das vorliegende Austauschformat beinhaltet die Spezifikationen für die semantische Interoperabilität von Systemen im Zusammenhang mit "CDA-CH 2017 (specification)".

Die technische Interoperabilität ist eine Voraussetzung dafür, dass die semantische Interoperabilität zum Tragen kommt. Sie beinhaltet unter anderem den Transportmechanismus von Meldungen. Dieses Austauschformat macht zum Transportmechanismus keine Vorgaben.

Kapitel "5 Anwendungsfälle" zeigt relevante Anwendungsfälle und gibt Hinweise für eine geeignete Implementation. Den Hinweisen liegen Überlegungen zur Prozessinteroperabilität zugrunde. Vorgaben und eine vertiefte Behandlung der Prozessinteroperabilität sind jedoch nicht Gegenstand dieses Dokuments.

2.4.2 Ziele

Automatisierung:

- Automatisierung der Datenbereitstellung seitens der Datenlieferanten und damit Eliminierung von Fehlern, die heute durch manuelle Bearbeitung auftreten können.
- Automatisierung der Datenverarbeitung seitens der Behandelnden und damit Reduktion des Aufwandes, welcher die bisher praktizierten Verfahren und Abläufe verursachen.

Harmonisierung, Interoperabilität und Investitionsschutz:

- Sicherstellung der Wiederverwendbarkeit gleicher Elemente in den verschiedenen Austauschformaten und damit Reduktion des Entwicklungsaufwandes für neue Schnittstellen
- Harmonisierung der Informationen im CDA Header, da mit diese in den verschiedenen - von CDA-CH abgeleiteten - Austauschformaten identisch wiederverwendet werden können.

2.4.3 Abgrenzungen

Die vorliegende Spezifikation fokussiert auf die Strukturierung der administrativen Informationen in einem HL7 CDA Dokument (CDA Header), wie sie beim Einsatz in der Schweiz angewendet werden sollen. Es handelt sich dabei z.B. um Sprache, Autor, Verweis auf ein allfällig zu ersetzendes Dokument oder einen Auftrag der zur Erstellung des neuen Dokuments geführt hat, weitere beteiligte Personen oder Organisationen (wie Notfallkontakte, Versicherungen, Arbeitgeber, rechtsgültiger Unterzeichner, etc.). Eine genauere Übersicht befindet sich im Kapitel "7 Spezifikation (normativ)".

Da es sich bei dieser Spezifikation um die Grundlage für den Austausch von strukturierten Dokumenten handelt wird von einer Strukturierung von medizinischen Daten ausgegangen. Es wird aber nicht auf die Strukturierung von medizinischen Daten eingegangen, denn dies ist Inhalt der verschiedenen Austauschformate, welche von CDA-CH für entsprechende Anwendungsfälle (wie z.B. elektronisches Impfdossier, eMedikation oder allgemeine Laborbefunde) abgeleitet werden.

Eine genauere Übersicht über die verschiedenen Varianten im CDA Body kann dem Wiki von HL7 Deutschland entnommen werden: [CDA Body im Arztbrief V2](#).

Folgende Themen werden vom vorliegenden Austauschformat nicht behandelt:

- Dokumente mit unstrukturierten Daten (CDA Body).
- Eigentliche Strukturierung von medizinischen Daten (CDA Body).
- Eigentliche Übertragung der Dokumente (Kommunikation).
- Definition von Prozessen, welche beim Empfänger durch die elektronische Verarbeitung der strukturierten Daten möglich werden.

2.5 Grundlagen und Basistechnologien

Die Anwendungsfälle rund um "CDA-CH 2017 (specification)" lassen sich nach den Empfehlungen der Strategie eHealth Schweiz umsetzen. Die elektronischen Informationen dazu sollen im elektronischen Patientendossier zugänglich sein und den Beteiligten eine elektronische Verarbeitung ermöglichen.

Das vorliegende Austauschformat basiert auf Integrationsprofilen der IHE und der HL7 Clinical Document Architecture (CDA). Siehe auch Kapitel "3.1 Bezug zu anderen Standards und Leitfäden".

2.6 Verantwortlichkeiten

Die Herausgeberin genehmigt ausdrücklich die Anwendung des vorliegenden Leitfadens ohne Lizenz- und Nutzungsgebühren zum Zweck der Übermittlung von "CDA-CH 2017 (specification)" und weist darauf hin, dass dies mit dem Einverständnis aller an der Erarbeitung des Austauschformats beteiligten Mitwirkenden erfolgt. Die Nutzung des Leitfadens erfolgt in der Verantwortung der Anwender.

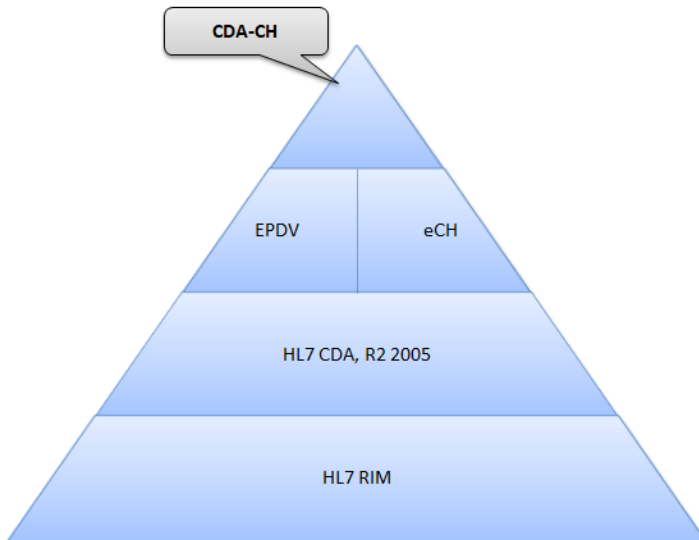

Die Codierung von einzelnen Informationen in dieser Spezifikation basiert auf definierten Value-Sets und Vokabularen, welche die akzeptierten Codes definieren.

Für die Publikation von Value-Sets ist das Koordinationsorgan Bund-Kantone „eHealth Suisse“ verantwortlich.

3 Formelle Grundlagen

3.1 Bezug zu anderen Standards und Leitfäden

Das vorliegende Austauschformat baut auf folgenden Grundlagen auf:

[Abbildung 1] *Bezug zu anderen Standards und Leitfäden – Referenzpyramide*

3.1.1 IHE Integrationsprofile

IHE (Integrating the Healthcare Enterprise) ist eine internationale Initiative zur Verbesserung des elektronischen Datenaustausches zwischen IT-Systemen im Gesundheitswesen. IHE erarbeitet sogenannte Integrationsprofile, welche definieren, wie bestehende Standards (z. B. HL7, DICOM) in Arbeitsabläufen anzuwenden sind, damit Informationssysteme unterschiedlicher Hersteller interoperabel und ohne Verlust von Informationen miteinander kommunizieren können. IHE wurde im Jahr 1998 in den USA ins Leben gerufen; Europa und Asien folgten kurz darauf. 2010 wurde IHE Suisse gegründet.

Dokumente, welche basierend auf IHE Inhaltsprofilen (Content Profiles) erstellt werden, können in der IHE Cross-enterprise document sharing Architektur (XDS.b) abgelegt, gemäss IHE Cross-Enterprise Document Reliable Interchange (XDR) an einen Empfänger gesendet oder wie von IHE Cross-Enterprise Document Media Interchange (XDM) vorgegeben auf ein Medium geschrieben und von dort wieder gelesen werden. Das IHE Integrationsprofil XDS.b ist im Übrigen die Basis für das verteilte elektronische Patientendossier (EPD) in der Schweiz.

Die, im vorliegenden Austauschformat referenzierten IHE Inhaltsprofile referenzieren auf HL7 CDA R2 als Basisstandard für Dokumenteninhalte.

3.1.2 HL7 V3

HL7 steht für "Health Level Seven" und bezeichnet einen internationalen Standard zum elektronischen Austausch von Daten im Gesundheitswesen. Die Zahl „7“ bezieht sich auf die siebte Schicht des OSI Modells und drückt damit aus, dass HL7 primär die Kommunikation auf der applikatorischen Ebene standardisiert. HL7 hat seinen Ursprung 1987 in den USA. Mittlerweile ist es eine kommerzielle Organisation (HL7.org), die HL7 heute in den Versionen 2.x und 3.0 anbietet. Gleichzeitig ist HL7.org die Dachorganisation aller HL7 Benutzer und koordiniert deren Aktivitäten auch auf internationaler Ebene. HL7-Affiliates existieren inzwischen in über 30 Ländern, darunter auch in der Schweiz.

Das vorliegende Austauschformat baut auf HL7 Version 3 auf. Version 3 ist XML-basiert und fusst auf einem umfangreichen Objektmodell, dem Reference Information Model (RIM). Dieses Modell bildet die Grundlage für Standards wie die Clinical Document Architecture (CDA) und damit auch für dieses Austauschformat.

3.1.3 HL7 Clinical Document Architecture (CDA)

Die HL7 Clinical Document Architecture ist ein offizieller ANSI und HL7 Standard mit gültiger Fassung R2 aus dem Jahr 2005. Die HL7 CDA R2 ist eine von mehr als 30 verschiedenen Domänen der HL7 V3 Standards-Familie, welche objektorientiert entworfen worden und im sogenannten HL7 Reference Information Model (RIM) dokumentiert ist.

3.2 Gesetzgebung Elektronisches Patientendossier (EPDG)

Mit dem elektronischen Patientendossier sollen die Qualität der medizinischen Behandlung gestärkt, die Behandlungsprozesse verbessert, die Patientensicherheit erhöht und die Effizienz des Gesundheitssystems gesteigert sowie die Gesundheitskompetenz der Patientinnen und Patienten gefördert werden.

Das Bundesgesetz über das elektronische Patientendossier regelt die Rahmenbedingungen für die Einführung und Verbreitung des elektronischen Patientendossiers und ist seit 15. April 2017 in Kraft. Für die vorliegende Spezifikation sind demnach die gesetzlichen Grundlagen zum EPDG relevant. Gesetz, Verordnungen, Erläuterungen und weitere Dokumente können beim BAG unter diesem [Link](#) bezogen werden.

Darüber sind auch OID Konzept, Empfehlungen und weitere Dokumente von "[eHealth Suisse](#)" relevant.

3.3 Übersetzungen

Diese Version des Dokuments ist in Deutsch und Französisch verfügbar.

4 Begriffsdefinitionen

In diesem Dokument verwendete Begriffe halten sich an die Begriffsdefinition im [Glossar von eHealth Suisse](#).

5 Anwendungsfälle

Die hier skizzierten Anwendungsfälle (UC = Use Case) beziehen sich auf Beispiele, wie sie heute bei den verschiedenen Akteuren im Schweizer Gesundheitswesen vorkommen, die mit dem vorliegenden Thema zu tun haben. Einige Anwendungsfälle werden erst möglich, wenn durch Import/Export-Mechanismen alle relevanten Informationen interoperabel fließen können.

Ziel ist einerseits die Bereitstellung von Informationen zum Gesundheitszustand des Patienten in einer menschlich lesbaren Form für die am Behandlungspfad beteiligten Personen. Andererseits sollen durch die elektronische Verarbeitung der Informationen Prozesse in den ICT-Systemen optimiert werden können.

Nachfolgend beschriebene Anwendungsfälle verdeutlichen diese Zusammenhänge im vorliegenden Kontext.

5.1 Einführung

Diese Spezifikation dient der Unterstützung des elektronischen Austauschs medizinischer Dokumente. Der bewusst weitgefaste Begriff des „medizinischen Dokuments“ ermöglicht die Anwendung dieser Vorgaben für eine Vielzahl von Situationen des medizinischen Alltags, insbesondere die Kommunikation mit Stellen in anderen Betrieben betreffend. Die Vielzahl der Dokumente wird anhand der folgenden, nicht abschliessenden Auflistung von Beispielen deutlich:

Dokumentart	Zweck	Beispiele
Medizinischer Bericht	Orientierung einer beteiligten Stelle über den Verlauf einer Behandlung	Austrittsbericht / Abschlussbericht, Übergabebericht an eine weiterbehandelnde Stelle, Zwischenbericht betreffend einer laufenden Behandlung
Auftrag	Auslösen einer Massnahme im Zusammenhang mit der Behandlung eines Patienten	Zuweisung zur stationären oder ambulanten Übernahme der Behandlung (z.B. Spitaleinweisung), Auftrag zur konsiliarischen Durchführung von diagnostischen oder therapeutischen Massnahmen, Weitere Verordnungen an beteiligte Stellen: SPITEX, Physiotherapie etc., Rezept
Bericht über Teilaspekte einer Behandlung	Orientierung über einzelne Teilaspekte einer Behandlung, häufig im Zusammenhang mit der Durchführung von therapeutischen oder diagnostischen Massnahmen	Operationsbericht, Laborresultate resp. Zusammenfassung der Laborresultate, Radiologiebefund, Pathologiebefund
Pflegeberichte	Orientierung über Pflegeinformationen betreffend Behandlung, Therapie und Pflege eines Patienten.	Pflegebericht, Behandlungsbericht Physiotherapie
etc.		

[Tabelle 1] Auflistung von Beispielen von medizinischen Dokumenten

Der Austausch medizinischer Dokumente kann verschiedene Ziele verfolgen:

- Als medizinischer Bericht dient er dem Informationsaustausch über Daten aus der Krankengeschichte eines Patienten zwischen Sender und Empfänger eines Dokumentes.
- In Form eines Auftrags dient er der Veranlassung weiterer Massnahmen durch den Empfänger eines Dokumentes in Bezug auf eine Patientenbehandlung.

Medizinische Dokumente sind traditionell zumeist in Absätzen gegliedert und häufig ausgezeichnet durch eine Überschrift. Die Absätze entsprechen dabei jeweils einer Informations-Entität oder einem Informationsaspekt, wie in den nachfolgenden Beispielen verdeutlicht wird. Allerdings ergibt sich die Wertigkeit einer Entität häufig erst aus dem Gesamtkontext eines Dokumentes. Abschnitte mit ähnlich lautender oder gleichlautender Bezeichnung sind also nicht in jedem Fall Sinn-äquivalent. So wird z.B. die Liste der Operationsdiagnosen aus einem Operationsbericht häufig nicht deckungsgleich mit der Diagnosenliste des späteren Austrittsberichtes dieses Patienten sein.

Der Austausch von Dokumenten ist meist Teil eines Workflows. Oft werden auch mehrere Dokumente, bezugnehmend aufeinander, im Rahmen eines medizinischen Ablaufes ausgetauscht. So wird sich der Befund einer diagnostischen Untersuchung beispielsweise auf die Fragestellung beziehen, welche im Auftrag zu dieser Untersuchung formuliert wurde. Es ist nicht Gegenstand des vorliegenden Dokumentes, Empfehlungen zur Implementierung medizinischer Abläufe abzugeben. Allerdings soll die Integration elektronischer Workflows durch die Definitionen dieser Spezifikation erleichtert und vereinfacht werden. Zur Demonstration der möglichen Ausgestaltung medizinischer Dokumente wird nachfolgend zusammenfassend das in CDA-CH V1 (2009) ausführlich beschriebene Fallbeispiel "Hüftgelenkersatz" dargestellt.

Die, in den nachfolgenden Unterkapiteln genannten Fallbeispiele sind frei erfunden und haben keinen didaktischen Anspruch. Sie könnten sich tatsächlich so abspielen, und dienen somit der Veranschaulichung der Situation. Gleiches gilt für die erwähnten Dokumente, deren Inhalte auf das Fallbeispiel abgestimmt sind.

5.2 Storyboard "Hüftgelenkersatz"

Dieses Fallbeispiel dient lediglich der Illustrierung für eine mögliche Umsetzung der vorliegenden Spezifikation und ist selbstverständlich nicht als Vorgabe zu werten.

Ein 70-jähriger Patient wendet sich wegen belastungsabhängigen Schmerzen im rechten Hüftgelenk, welche schon seit längerer Zeit bestehen, in den vergangenen Monaten aber deutlich zugenommen haben, an seinen Hausarzt.

Aufgrund der Anamnese und des klinischen Status des Patienten stellt der Hausarzt die Verdachtsdiagnose einer Arthrose des rechten Hüftgelenkes als Ursache für die Beschwerden. Der Hausarzt entschliesst sich, den Verdacht durch eine Röntgenuntersuchung des Hüftgelenkes zu bestätigen. Da er selbst keine Röntgenuntersuchungen durchführt, meldet er den Patienten in einem externen Röntgeninstitut mittels eines Auftragsformulars an und vereinbart auch gleich einen Untersuchungstermin. Die Bilder der Untersuchung sowie ein Röntgenbefund mit Beurteilung durch den radiologischen Facharzt werden dem Hausarzt kurz nach Durchführung der Untersuchung zugestellt.

Bei der nächsten Konsultation bespricht der Hausarzt die Situation mit dem Patienten. Es wird gemeinsam entschieden, den Patienten an einen Facharzt für Orthopädie zur Besprechung der Therapieoptionen zu überweisen. Der Hausarzt verfasst einen Überweisungsbericht, welcher den bisherigen Krankheitsverlauf und die Untersuchungsergebnisse umreisst und übermittelt diesen, zusammen mit den Röntgenbildern an die Praxis des Orthopäden.

Nachdem er sich über den radiologischen Befund anhand der übermittelten Röntgenbilder bereits vorgängig orientiert hat, empfiehlt der Orthopäde dem Patienten die operative Sanierung des rechten Hüftgelenkes mittels Implantation einer Hüftgelenks-Endoprothese. Der Patient erklärt sich mit dem Vorschlag einverstanden.

Der Orthopäde informiert den Hausarzt über den Entscheid und bittet ihn, die Spitaleinweisung zu organisieren und die präoperativen Laboruntersuchungen in der Hausarztpraxis durchzuführen.

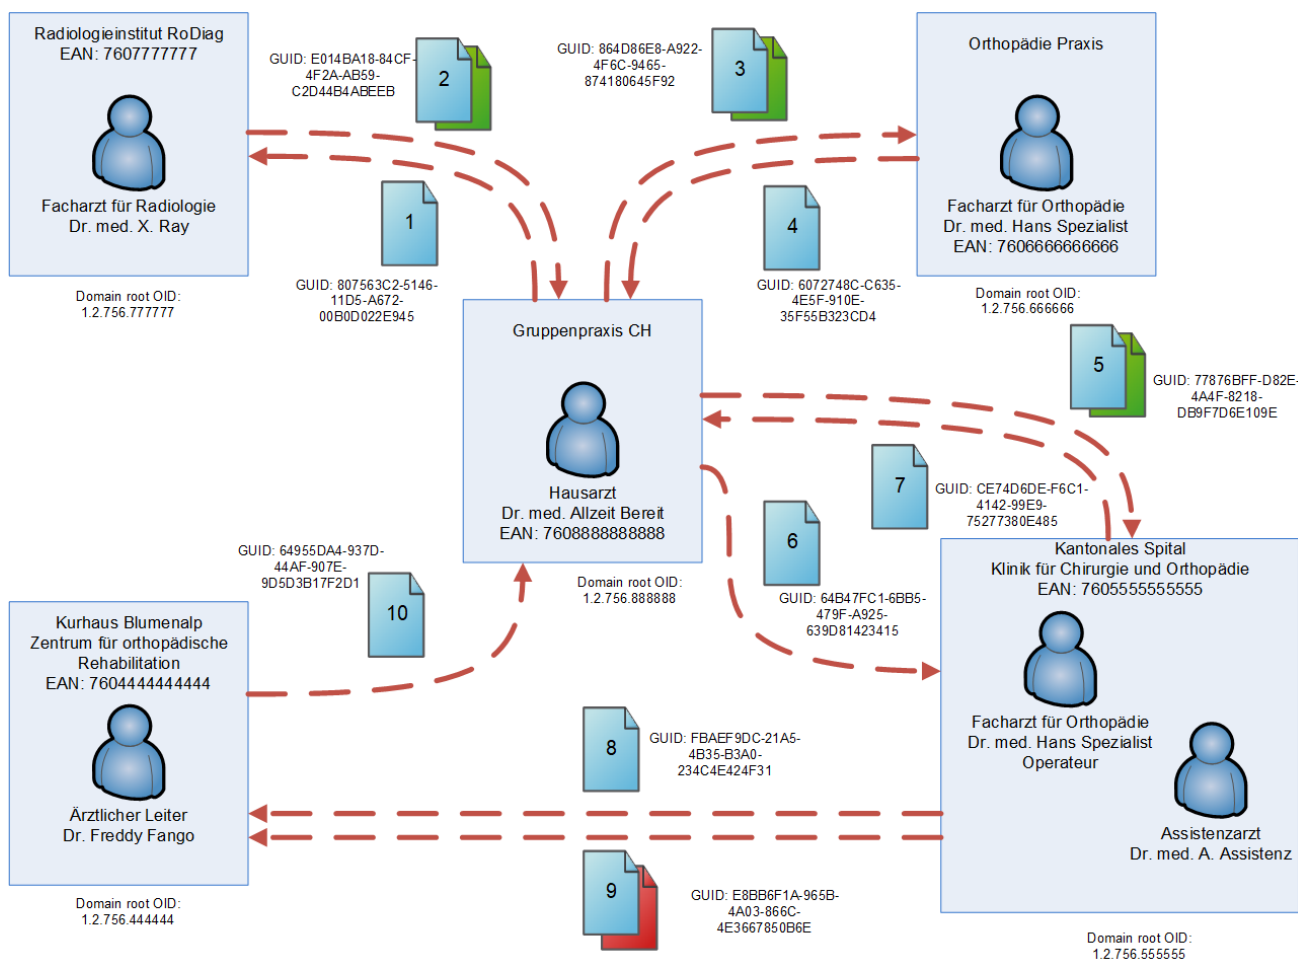

Kurz vor dem Spitaleintritt hat der Patient einen Termin bei seinem Hausarzt, um die vor der Operation notwendigen Laborwerte bestimmen zu lassen. Die Laborwerte werden vom Hausarzt der Klinik übermittelt, wo sie ins elektronische Patientendossier aufgenommen werden.

Während der Operation stehen dem Orthopäden die Röntgenbilder der Hüfte zur Verfügung. Die Lage der Endoprothese wird intraoperativ mittels C-Bogen kontrolliert. Postoperativ werden in der Klinik erneut Kontroll-Röntgenbilder der Hüfte erstellt. Der Orthopäde dokumentiert den Operationsverlauf und gibt Instruktionen für die weitere Nachbehandlung in einem Operationsbericht. Dem Hausarzt wird eine Kopie dieses Operationsberichtes zugestellt.

Der Patient kann nach einer Woche Spitalaufenthalt in eine stationäre Rehabilitation entlassen werden. Die Ärztliche Leitung des Rehabilitationshauses wird über den Krankheits- und OP-Verlauf durch einen zusammenfassenden Entlassbrief informiert. Dem Bericht werden eine Zusammenfassung der Laborresultate, eine Kopie der Röntgenbilder und eine Kopie des Operationsberichts beigelegt. Der Hausarzt erhält ebenfalls eine Kopie des Austrittsberichtes.

Nach abgeschlossener Rehabilitation des Patienten erstellt die Rehabilitationsklinik ihrerseits einen orientierenden Bericht zuhanden des Hausarztes mit Kopie an den Orthopäden. Die Behandlung wird mit einer Abschlusskonsultation beim Hausarzt schliesslich beendet.

Dokumenten-Workflow Fallbeispiel Hüftgelenkersatz

[Abbildung 2] Dokumenten-Workflow Fallbeispiel Hüftgelenkersatz

5.2.1 UC 1-1: Zuweisung zur Radiologischen Diagnostik

Ein Patient wird dabei durch seinen Arzt zur radiologischen Untersuchung angemeldet. Es wird um Rückmeldung eines möglichen Termins ersucht. Der resultierende Radiologiebefund wird Bezug nehmen auf dieses Zuweisungsschreiben. Es handelt sich im obigen Fallbeispiel um den Auftrag zur radiologischen Untersuchung vom Hausarzt an das Radiologieinstitut.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.1 Zuweisung zur Radiologischen Diagnostik"
- Elektronisch: [1-Zuweisung zur Radiologischen Diagnostik.xml](#)

5.2.2 UC 1-2: Rückmeldung Radiologiebefund

Dieses Dokument beinhaltet die Rückmeldung der vorgängig beauftragen Radiologieuntersuchung und nimmt Bezug auf das Zuweisungsschreiben. Es handelt sich im obigen Fallbeispiel um die Rückübermittlung der resultierenden Bilder und des Befundes vom Radiologen an den Hausarzt.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.2 Rückmeldung Radiologiebefund"
- Elektronisch: [2-Rückmeldung Radiologiebefund.xml](#)

5.2.3 UC 1-3: Überweisung zur konsiliarischen Beurteilung durch den Facharzt

Ein Patient wird durch seinen Hausarzt zur konsiliarischen Beurteilung an einen Facharzt überwiesen. Es handelt sich im obigen Fallbeispiel um das Überweisungsschreiben vom Hausarzt an den Orthopäden, zusammen mit den Röntgenbildern und einer Zusammenfassung der Vorgeschichte und der erhobenen Befunde.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.3 Überweisung zur konsiliarischen Beurteilung durch den Facharzt"
- Elektronisch: [3-Überweisung zur konsiliarischen Beurteilung durch den Facharzt.xml](#)

5.2.4 UC 1-4: Konsiliarbericht

Konsiliarischer Untersuchungsbericht des Facharztes an den Hausarzt. Dieses Dokument beinhaltet die Rückmeldung der vorgängig beauftragen Radiologieuntersuchung und nimmt Bezug auf das Zuweisungsschreiben. Es handelt sich im obigen Fallbeispiel um den ärztlichen Bericht des Orthopäden an den Hausarzt mit der fachärztlichen Beurteilung und einer Beschreibung des weiteren Vorgehens (OP).

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.4 Konsiliarbericht"
- Elektronisch: [4-Konsiliarbericht.xml](#)

5.2.5 UC 1-5: Reguläre Spitaleinweisung

Einweisung eines Patienten durch den Hausarzt zur stationären Behandlung in einer Klinik. Es handelt sich im obigen Fallbeispiel um die Bitte des Hausarztes an das Spital, den Patienten zur Operation anzubieten.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.5 Reguläre Spitaleinweisung"
- Elektronisch: [5-Reguläre Spitaleinweisung.xml](#)

5.2.6 UC 1-6: Präoperative Untersuchungsergebnisse

Übermittlung der, vor der Hospitalisation in der Hausarztpraxis erhobenen Befunde ans Spital. Es handelt sich im obigen Fallbeispiel um die aktuellen Befunde aus der körperlichen Untersuchung und Übermittlung von Laboranalyse-Ergebnissen vom Hausarzt ans Spital.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.6 Präoperative Untersuchungsergebnisse"
- Elektronisch: [6-Präoperative Untersuchungsergebnisse.xml](#)

5.2.7 UC 1-7: Operationsbericht

In Form eines Operationsberichtes dokumentiert der Operateur durchgeführte Eingriffe. Es ist die Dokumentation der durchgeführten Operation für die Spitalakte. Kopien dieses Dokuments werden üblicherweise an die direkt an der Behandlung beteiligten Stellen geschickt: an den zuweisenden Arzt und gegebenenfalls an weitere behandelnde Stellen. Es handelt sich im obigen Fallbeispiel um den Operationsbericht des Orthopäden an den Hausarzt.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.7 Operationsbericht"
- Elektronisch: [7-Operationsbericht.xml](#)

5.2.8 UC 1-8: Kurzbericht bei Spitalentlassung

Kurzbericht, kann dem Patienten bei Austritt direkt mitgegeben werden und dient zur Groborientierung des nachbehandelnden Arztes. Es handelt sich im obigen Fallbeispiel um eine Grobinformation des Spitals an den nachbehandelnden Arzt im Rehabilitationszentrum.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.8 Kurzbericht bei Spitalentlassung"
- Elektronisch: [8-Kurzbericht bei Spitalentlassung.xml](#)

5.2.9 UC 1-9: Spital-Austrittsbericht

Zusammenfassung der Patientenakte bezogen auf die aktuelle Behandlung. Dieses Dokument soll eine Übersicht über die behandlungsrelevanten Fakten ermöglichen. Eine Kopie des Dokumentes geht üblicherweise an den zuweisenden Arzt und gegebenenfalls an weitere behandelnde Stellen. Es handelt sich im obigen Fallbeispiel um das Überweisungsschreiben an die Rehabilitationsklinik (inklusive postoperative Röntgenbilder mit der Total-Endoprothese und Zusammenfassung der La-

borresultate) mit Kopie an den Hausarzt.

Umsetzungsbeispiele:

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.9 Spital-Austrittsbericht"
- Elektronisch: [9-Spital-Austrittsbericht.xml](#)

5.2.10 UC 1-10: Austrittsbericht Reha-Klinik

Bericht über den Rehabilitationsverlauf, mit Kopie an gewisse in die Behandlung involvierte Stellen. Es handelt sich im obigen Fallbeispiel um den Entlassbrief der Rehabilitationsklinik an den Hausarzt mit Kopie an den Orthopäden.

Umsetzungsbeispiele:

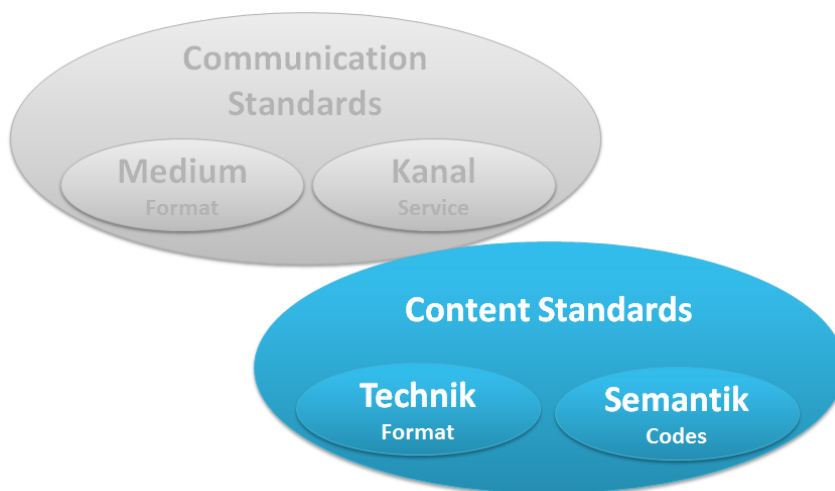

- Papier/PDF: [CDA-CH V1.2 \(2009\)](#). Siehe dort Kapitel "12.7.10 Austrittsbericht Reha-Klinik"
- Elektronisch: [10-Austrittsbericht Reha-Klinik.xml](#)

6 Empfehlungen

Dieses Kapitel enthält Empfehlungen, welche im Sinne einer Harmonisierung hilfreich sind. Die nachfolgend genannten Empfehlungen können auch als "Best practices" betrachtet werden. Die nachfolgend genannten Empfehlungen sind nicht normativ und deren Umsetzung somit freiwillig.

6.1 Transportmechanismus

Die vorstehend beschriebenen Anwendungsfälle erfordern eine Kommunikation zwischen den Applikationen bei Sender und Empfänger. Bei der Implementierung ist zwischen medizinischem bzw. fachlichem Inhalt (Content) und eigentlichem Transport dieser Inhalte (Communication) zu unterscheiden.

[Abbildung 3] *Communication vs. Content*

Das vorliegende Dokument spezifiziert den Inhalt (Content). Die Spezifikation des Transportweges ist nicht Teil dieses Dokumentes.

6.1.1 Empfehlung zum Transportmechanismus

Der Inhalt (Content), der mit vorliegendem Dokument spezifiziert wird, soll mit sogenannten Metadaten (Angaben zum Typ, Inhalt, Autor, Empfänger, Patient, etc.) angereichert werden und als Paket (Dokument plus Metadaten) über einen sicheren Kanal übertragen werden. Dazu eignen sich folgende Transaktionen aus dem [IHE IT Infrastructure Technical Framework](#):

- Cross-Enterprise Document Media Interchange (XDM)
 - Distribute Document Set on Media [ITI-32]
- Cross-Enterprise Document Reliable Interchange (XDR)
 - Provide and Register Document Set-b [ITI-41]
- Cross-Enterprise Document Sharing (XDS.b)
 - Provide and Register Document Set-b [ITI-41]
 - Registry Stored Query [ITI-18]
 - Retrieve Document Set [ITI-43]

Diese Transaktionen sind auch Rahmen des elektronischen Patientendossiers (EPD) anwendbar.

6.2 Umgang mit Metadaten

Wie bei den Empfehlungen zum Transportmechanismus genannt und auch im Zusammenhang mit dem elektronischen Patientendossier ist ein harmonisierter Umgang mit Metadaten zu den Dokumenten, welche mit CDA-CH V2 erstellt werden, sehr empfehlenswert.

In den Header Informationen eines HL7 CDA Dokuments befinden sich zahlreiche Informationen, die auch in den Metadaten einer IHE XDS.b Registry genannt werden. Unabhängig davon, ob es sich um eine IHE XDS.b Umgebung im Rahmen des EPDG handelt oder ob es sich um eine andere Affinity Domain (auch Gemeinschaft oder Community genannt) handelt, können bestimmte XDS.b Metadaten aus den CDA Header Informationen extrahiert werden. Dabei gilt zu beachten, dass mit dem IHE Profil 'XDS Metadata Update' die Metadaten in einer XDS.b Registry verändert werden können. Die Metadaten im CDA Dokument bleiben dabei aber unverändert.

eHealth Suisse hat hier konkrete Umsetzungshinweise zum Mapping Metadaten und dem Einsatz von Value Sets dokumentiert: [Metadaten gemäss EPDV](#).

6.3 Umgang mit Original Darstellung und PDF Dokumenten

Die Digitalisierung ist ein grosser Fortschritt, der gerade auch bei betriebsübergreifenden Prozessen zahlreiche Verbesserungen mit sich bringen kann.

So ist z.B. aus Sicht eines Spitals die Liste der aktuellen Medikamente, die ein Patient beim Austritt einnimmt, in der Regel ein Kapitel am Ende des Spitalaustrittsberichts. Gerade diese Liste ist aber für die nachbehandelnde Stelle besonders wichtig. Es macht also durchaus Sinn, für die Darstellung des Spitalaustrittsberichts im Spital und bei der nachbehandelnden Stelle (z.B. Hausarzt, Spitex oder Rehabilitations-Klinik) verschiedene Stylesheets auf das gleiche CDA Dokument anzuwenden. Damit kann bei der nachbehandelnden Stelle das Kapitel mit den Medikamenten bei Austritt aus dem Spital zuoberst dargestellt werden. Das erlaubt es den nachbehandelnden Gesundheitsfachpersonen wichtige Informationen zuerst zu finden.

Ein anderes Beispiel findet man bei Laborbefunden: Für die Laboratorien ist es wichtig, dass der Empfänger die Originaldarstellung eines Laborbefundes erhalten kann, weil die elektronisch strukturierten Befunde (oft auch in Form von HL7 V2 Nachrichten ausgetauscht) nicht in allen Empfänger-Systemen korrekt wiedergegeben werden. Die Laboratorien können aber für falsche Darstellungen keine Verantwortung tragen und dies gilt nicht nur für HL7 V2 Nachrichten, sondern auch für Laborbefunde basierend auf HL7 CDA (z.B. mit dem Austauschformat eLaborbefund – CDA-CH-LREP).

Die Verantwortung für die korrekte Anwendung von Gesundheitsinformationen in einem CDA Dokument kann also nicht alleine vom Absender (Autor/Unterzeichner) wahrgenommen werden, sondern der Empfänger muss ebenfalls seine Verantwortung wahrnehmen. Der rechtsgültige Unterzeichner eines CDA Dokuments kann keinesfalls dafür haften, wenn beim Empfänger infolge der Anwendung eines anderen Stylesheets bestimmte Informationen anders, falsch oder gar nicht dargestellt werden.

Es geht aber nicht darum, aus diesem Grund auf die Anwendung von CDA Dokumenten zu verzichten, sondern es geht darum, die daraus entstehenden Vorteile (wie oben anhand des Beispiels der Medikamentenliste beschrieben) zu nutzen, ohne aber neue Probleme im Bereich der Verantwortung oder Haftung zu schaffen.

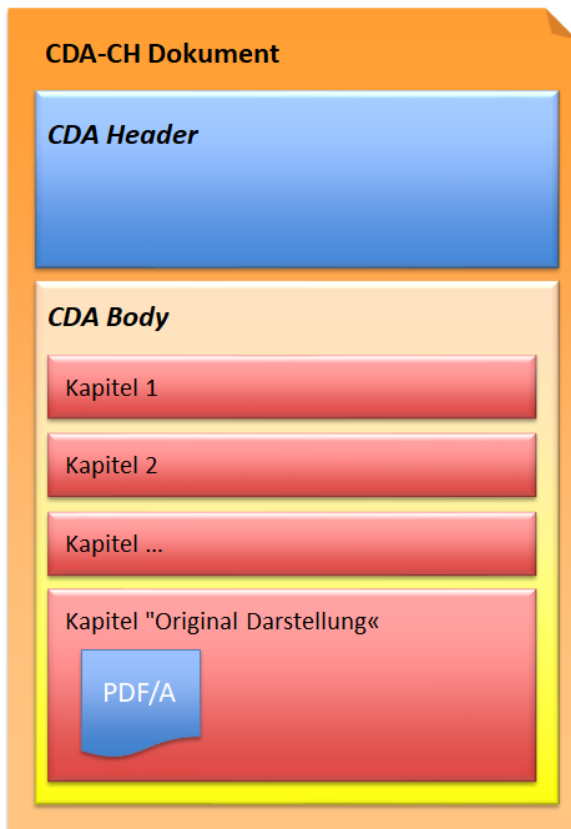

Aus diesen Gründen sind nachfolgende Empfehlungen hervorgegangen.

6.3.1 Empfehlung zum Umgang mit der Original Darstellung

- In einem CDA Dokument soll, wenn es der Autor des Dokuments als wichtig erachtet oder wenn es in einem bestimmten Anwendungsfall notwendig ist, die Originaldarstellung so mitgegeben werden wie sie der rechtsgültige Unterzeichner zum Zeitpunkt seiner Signatur ge-

sehen hat. Ob also die Original Darstellung in ein CDA Dokument integriert wird, ist somit auf der Ebene von CDA-CH V2 freiwillig. Eine Präzisierung dazu kann in den Austauschformaten festgehalten werden, welche von CDA-CH V2 ableiten.

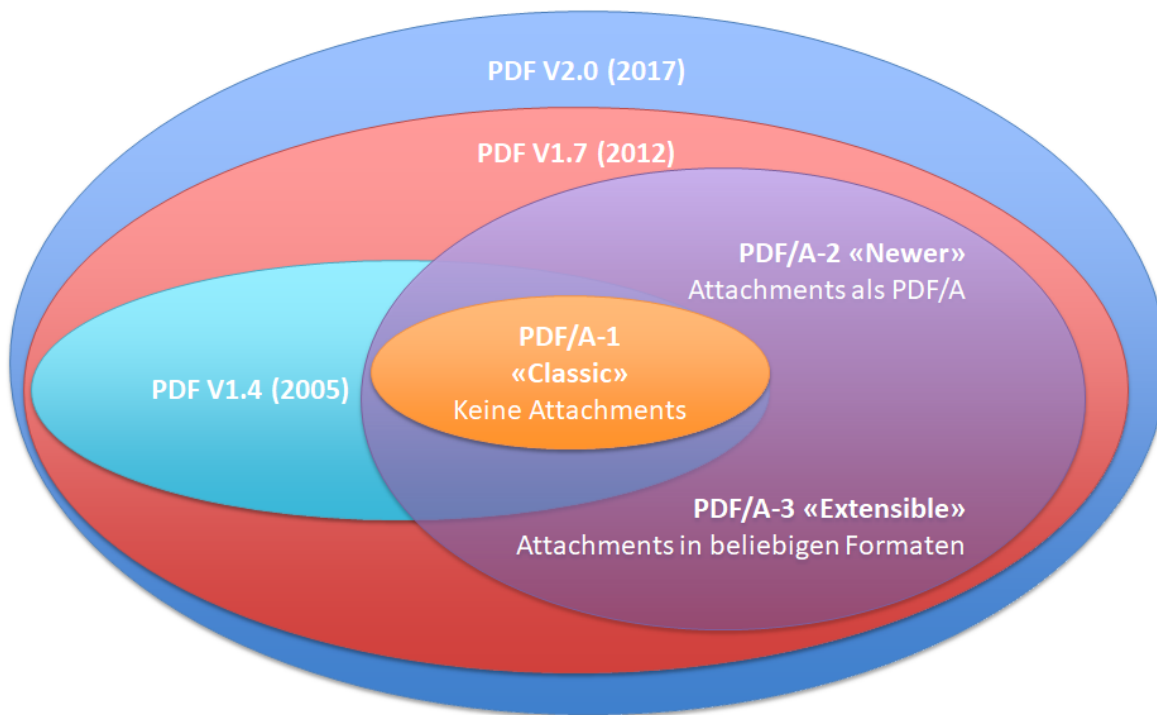

- Wenn die Originaldarstellung mitgegeben wird, dann soll sie in Form eines PDF Dokuments in HL7 CDA Dokumente integriert werden (siehe [CDA Beispieldokument mit eingebetteter Original Darstellung im PDF/A Format](#)).

[Abbildung 4] Original Darstellung mittels eingebettetem PDF/A im CDA Body

6.3.2 Empfehlung zum Umgang mit PDF Dokumenten

- Wenn PDF Dokumente in einem CDA Dokument eingebettet oder referenziert werden, dann sollen diese in Form von PDF/A in CDA integriert werden. Dies gilt sowohl für die Original Darstellung, wie auch für allfällige Beilagen oder referenzierte Dokumente.
- Dabei soll die Ausprägung PDF/A-1 verwendet werden, denn PDF/A-1 basiert auf PDF V1.4 und ist somit auch mit älteren Systemen erzeug- und nutzbar.
- Dabei soll der Konformitätsgrad PDF/A-1a eingehalten werden, denn jedes Dokument, welches dem strengeren Standard PDF/A-1a genügt, genügt auch dem weniger strengen Standard PDF/A-1b.
- PDF Dokumente in den Ausprägungen PDF/A-2 oder PDF/A-3 sollen im Zusammenhang mit CDA-CH nicht verwendet werden. Stattdessen sollen die mit PDF/A-2 oder PDF/A-3 spezifizierten Attachments als eigenständige Attachments in CDA eingebettet oder referenziert werden.

[Abbildung 5] PDF/A Ausprägungen

6.3.3 Hinweise und Begründungen zu den obenstehenden Empfehlungen

- Die Einbettung von Multimedia Objekten (also auch PDF Dokumente) in ein HL7 CDA Dokument erfolgt Base64 codiert, damit auch binäre Datenströme in XML eingebettet werden können.
- Es würde auch die Varianten geben, CDA- und PDF-Dokumente separat als eigenständige Dokumente zu übertragen und miteinander zu verlinken oder das CDA Dokument als XML Element in das PDF Dokument zu integrieren. Auf diese Varianten wird aber nicht eingegangen.

Gründe für den Variantenentscheid, CDA in PDF zu integrieren:

- Aus Sicht der Softwarehersteller ist es wichtig, dass für die Umsetzung der Original Darstellung nur eine von mehrere Varianten implementiert werden muss (Vermeidung von n*m Schnittstellen).
- HL7 CDA Dokumente sind XML Dokumente. XML kann in den gängigen Datenbanksystemen als eigenständiger Datentypen abgelegt und zu einem späteren Zeitpunkt mittels Datenbankabfragen wieder strukturiert ausgewertet werden.
- PDF/A ist unabdingbar:
 - Ein herkömmliches PDF ist nicht geeignet für eine Langzeitarchivierung, weil wichtige Informationen (wie z.B. die Schriftart) nicht zwingend im Dokument eingebettet sein müssen, die aber für die identische Darstellung auf einem anderen Computer essentiell sind.
 - Sowohl das Merkblatt [Archivtaugliche Dateiformate](#) des Bundesarchivs, sowie auch der [Anhang 2 der Verordnung des EDI über das elektronische Patientendossier \(Zertifizierungsvoraussetzungen Gemeinschaften und Stammgemeinschaften\)](#) verlangen deshalb PDF/A.
 - Die PDF Ausprägungen (A-1, A-2, A-3) sind nicht voneinander ableitbar und auch nicht ineinander subsummierbar. Bei vielen der gängigen PDF Validatoren muss deshalb der PDF Konformitätsgrad vor der Validierung definiert werden. Sollten also meh-

rere PDF Ausprägungen zugelassen werden, müsste die Validierung pro eingebettetes PDF Dokument mehrmals aufgerufen werden.

- Die obenstehende Empfehlung nach dem Konformitätsgrad PDF/A-1a erfüllt einerseits die Anforderungen des Bundesarchivs und des EPDG und es sind andererseits genügend Softwarekomponenten für die Generierung von PDF Dokumenten auf dem Markt, welche diesen Standard erfüllen.

6.4 Umgang mit Identifikatoren

Bei den nachfolgenden Empfehlungen zu Identifikatoren wird Rücksicht genommen auf die rechtlichen Vorgaben in der Schweiz und es gilt zu berücksichtigen, dass CDA-CH V2 sowohl im Rahmen verschiedener Gesetze (z.B. EPDG^[Anmerkung 2], EpG^[Anmerkung 3], IVG^[Anmerkung 4], AHVG^[Anmerkung 5], KVG^[Anmerkung 6], etc.), wie auch im bilateralen Austausch zwischen Behandelnden oder Gesundheitseinrichtungen eingesetzt wird. Die nachfolgenden Empfehlungen zu Identifikatoren erfüllen diese übergeordneten Vorgaben. Weitere Vorgaben werden in CDA-CH V2 nicht formuliert. Solche können gegebenenfalls in den Austauschformaten festgehalten werden, welche von CDA-CH V2 ableiten.

6.4.1 Empfehlung zum Umgang mit Identifikatoren für Patienten

Folgende Identifikatoren für Patienten sollen in CDA-CH V2 Dokumenten verwendet werden:

- Alle lokalen Identifikatoren der Primärsysteme
- Eindeutige Patientenidentifikation im Master-Patient Index einer Gemeinschaft (MPI-PID)

Folgende Identifikatoren für Patienten sollen in CDA-CH V2 Dokumenten nur nach Prüfung der gesetzlichen Grundlage verwendet werden:

- AHV Nummer (Sozialversicherungsnummer)
Darf bei der Einstellung des Dokuments ins EPD nicht vorhanden sein. Ausserhalb des EPD legen Artikel 50d und 50e AHVG den allgemeinen Rahmen der gesetzlichen Grundlagen für die systematische Verwendung der AHV Nummer fest. Diese hängen von der Art der Organisation sowie ihren Tätigkeiten ab. So dürfen Leistungserbringer nach KVG in bestimmten Fällen die AHV Nummer nutzen. Es obliegt allein der Organisation, die massgebliche gesetzliche Grundlage zu benennen.
- Patientenidentifikationsnummer (EPR-SPID)
Diese wird im Rahmen des EPDG bei Eröffnung eines Patientendossiers einem Patienten von der ZAS^[Anmerkung 7] herausgegeben und darf gemäss EPDG, Art. 6 nur verwendet werden, wenn eine formelle gesetzliche Grundlage dies vorsieht sowie der Verwendungszweck und die Nutzungsberechtigten bestimmt sind.

6.4.2 Empfehlung zum Umgang mit Identifikatoren für Behandelnde und Gesundheitseinrichtungen

Folgende Identifikatoren für Behandelnde und Gesundheitseinrichtungen sollen in CDA-CH V2 Dokumenten verwendet werden:

- Alle lokalen Identifikatoren der Primärsysteme
- Eindeutige Identifikation von Behandelnden und Gesundheitseinrichtungen, sowie Gruppen von Behandelnden im Healthcare Provider Directory einer Gemeinschaft (HPD-ID):
 - Für Behandelnde und Gesundheitseinrichtungen ist insbesondere die GLN erlaubt und empfohlen.
Hinweis: Ab 15.4.2020 wird die GLN im Rahmen des EPDG für alle Behandelnden zwingend.

- Für Gruppen von Behandelnden ist insbesondere die OID, wie sie gemäss Ergänzung 1 zu Anhang 5 der EPDV-EDI (Nationale Anpassungen) eingetragen wird, erlaubt und empfohlen.

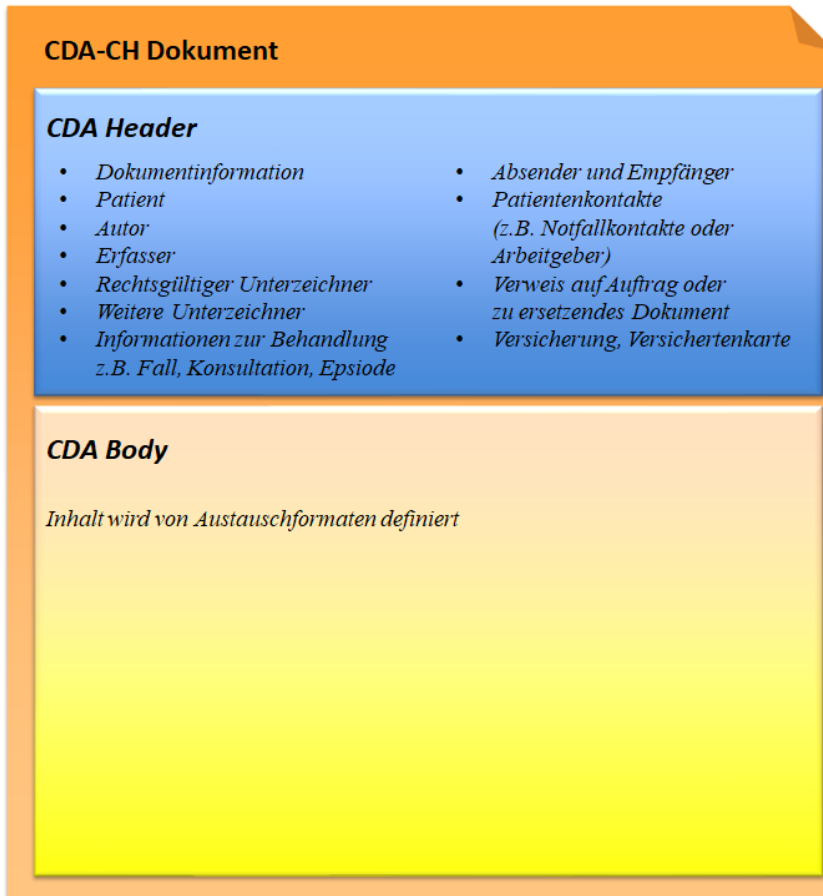

Folgende Identifikatoren für Behandelnde und Gesundheitseinrichtungen sollen in CDA-CH V2 Dokumenten nicht verwendet werden:

- AHV Nummer (Sozialversicherungsnummer)
- Patientenidentifikationsnummer (EPR-SPID)

7 Spezifikation (normativ)

7.1 Vereinfachte Zusammenfassung der CDA Struktur

Die genaue Struktur des CDA Dokuments ist in den nachfolgenden Kapiteln im Detail beschrieben. Dem eiligen Leser bieten wir hier eine stark vereinfachte Zusammenfassung der Elemente in der vorliegenden Spezifikation.

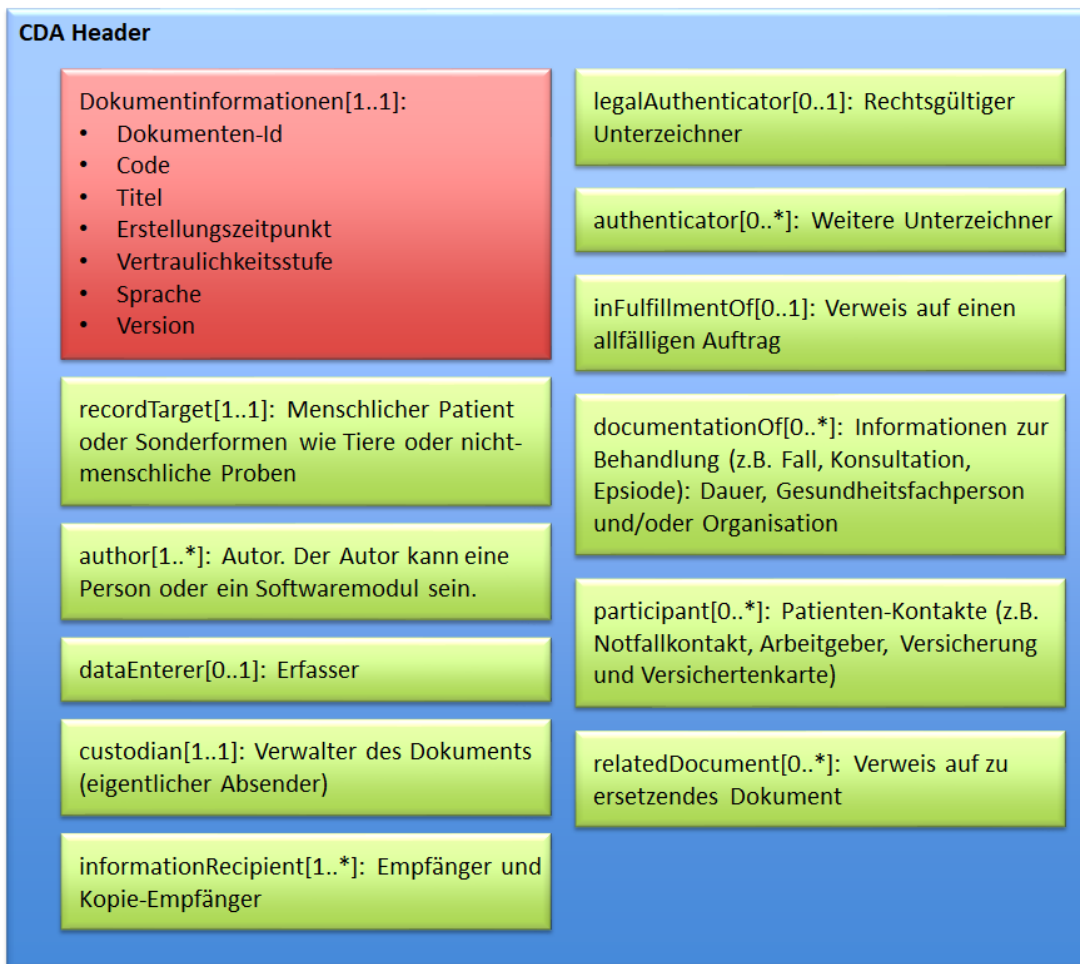

[Abbildung 6] *Inhalt CDA Dokument*

Die Auflistungen und Abbildungen in diesem Kapitel (inkl. Unterkapitel) enthalten vereinfachte Darstellungen des Dokumenteninhalts und zeigen den Inhalt des CDA Dokuments symbolhaft auf.

7.1.1 CDA Header

- Dokumentinformation (Dokumenten-Id, Code, Titel, Erstellungszeitpunkt, Vertraulichkeitsstufe, Sprache, Version)
- Angaben zum Patient (Patientenidentifikation, Name, Adresse, Geburtsdatum, Geburtsort, Geschlecht, Zivilstand, Religion, Sprachfähigkeiten) resp. zu nicht-menschlichen Proben
- Mitwirkende am Dokument: Autoren, Erfasser
- Rechtsgültiger Unterzeichner, weitere Unterzeichner wie z.B. klinische Validatoren
- Absender (Verwalter)
- Empfänger inkl. allfälliger Kopie-Empfänger
- Patienten-Kontakte (z.B. Notfallkontakt, Arbeitgeber, Versicherung und Versichertenkarte)
- Verweis auf den Auftrag oder ein allfällig zu ersetzendes Dokument

[Abbildung 7] *Administrative Daten im CDA Header*

7.1.2 CDA Body

Der CDA Body wird von dieser Spezifikation nicht normiert. Die medizinischen Inhalte im CDA Body werden von den entsprechenden Austauschformaten spezifiziert.

7.2 Allgemeines

Ein Dokument, welches anhand dieser Spezifikation erstellt wird, ist ein HL7 CDA Dokument und damit ein definiertes und komplettes Informationsobjekt, das Texte, Bilder und andere multimediale Objekte enthalten kann. CDA Dokumente dokumentieren den Gesundheitszustand eines Patienten zu einem bestimmten Zeitpunkt. Sie enthalten administrative (Header) und medizinische (Body) Daten und sind mittels eXtensible Markup Language (XML) kodiert.

Die normative Spezifikation definiert das Dokument „CDA-CH 2017 (specification)“ als HL7 CDA Vorlage, welche helvetische Präzisierungen für den CDA Header festlegt. Damit produzierte Dokumente sind vollständig kompatibel zum internationalen HL7 CDA R2 Standard (Normative Edition 2005) und somit international interoperabel.

Die normative Spezifikation bezweckt, dass Systeme für das Handling von Informationen im CDA Header durch die Softwarehersteller unabhängig von Sender und Empfänger implementiert werden können.

Die vorliegende Spezifikation wurde in ART-DECOR modelliert und daraus können auch Schematron-Regeln generiert werden, welche eine automatisierte und harmonisierte Validierung der CDA-Dokumente erlauben.

7.2.1 Schlüsselwörter

Die normative Spezifikation verwendet folgende, jeweils in Grossbuchstaben geschriebene Schlüsselwörter zu Angabe von Verbindlichkeiten. Siehe auch [ELGA Allgemein], Kap. 4.1 resp. RFC 2119.

MUSS (engl. MUST) bedeutet eine verpflichtend einzuhaltende Vorschrift. Entspricht der Optionalität [R] und [M].

NICHT ERLAUBT (engl. NOT PERMITTED) formuliert ein verpflichtend einzuhaltendes Verbot. Entspricht der Optionalität [NP].

SOLL oder **EMPFOHLEN** (engl. SHOULD) steht für eine pragmatische Empfehlung. Es ist gewünscht und empfohlen, dass die Anforderung umgesetzt wird, es kann aber Gründe geben, warum dies unterbleibt. Entspricht der Optionalität Required [R]. Wenn kein Wert angegeben werden kann, MUSS nullFlavor angegeben werden.

KANN oder **OPTIONAL** (engl. MAY, OPTIONAL). Die Umsetzung der Anforderung ist optional, sie kann auch ohne zwingenden Grund unterbleiben. Entspricht dem Optionalität [O].

7.2.2 Optionalität

Nachfolgende Tabelle legt die Verwendung von zwingenden, empfohlenen und optionalen Elementen und den dazu gehörenden Kardinalitäten inkl. Verwendung von nullFlavor normativ fest. Die nachfolgende Definition wurde aus [IHE Technical Frameworks General Introduction, Appendix E: Standards Profiling and Documentation Conventions, Revision 1.0, July 1, 2014](#), "Table E.4.2.2.1-1: Data Element Optionality Constraints" übernommen und mit dem Element [NP] ergänzt.

Optionalitäten	Mögliche Kardinalitäten	Verwendung von nullFlavor	Beschreibung
[M]	1..1 1..*	NICHT ERLAUBT	Das Element MUSS mit einem korrekten "echten" Wert angegeben werden. nullFlavor oder "Dummy"-Werte sind NICHT ERLAUBT.
[NP]	0..0	NICHT ERLAUBT	Element ist NICHT ERLAUBT.
[R]	1..1 1..*	KANN verwendet werden	Das Element MUSS in der Instanz vorhanden sein. Wenn nicht bekannt, ist die Verwendung von nullFlavor vorgeschrieben, "Dummy"-Werte sind NICHT ERLAUBT.
[O]	0..1 0..*	KANN verwendet werden	Das Element ist OPTIONAL. Sender können das Element angeben. Leere optionale Elemente sind nicht zugelassen, sofern kein nullFlavor angewandt wird.
[C]	[N/A]	[N/A]	KONDITIONALES Optionalität. Die Optionalität des Elements variiert in Abhängigkeit von anderen Elementen, Situationen oder Zuständen. Die konkreten Abhängigkeiten sind jeweils angegeben.

[Tabelle 2] *Notationen in diesem Dokument*

7.2.3 nullFlavor

Wenn ein Wert nicht bekannt ist, kann dort wo es gemäss obenstehender Tabelle erlaubt ist, mit den nullFlavor-Codes in "7.3.6.4 HL7 NullFlavor" der Grund für die fehlende Angabe präzisiert werden. Wird ein nullFlavor eingesetzt, DÜRFEN mit Ausnahme von xsi:type KEINE weiteren Attribute angegeben werden.

7.2.4 Hierarchie der Spezifikationen

Diese Spezifikation basiert in nachstehender Rangfolge auf folgenden Grundlagen:

1. [HL7 Version 3](#)
2. [HL7 Clinical Document Architecture, Release 2.0](#)
3. eCH Standards
 1. [Postadresse eCH-0010, Version 7.0](#)
 2. [Datenstandard Personendaten eCH-0011, Version 8.1](#)
4. [Gesetzgebung Elektronisches Patientendossier \(EPDG\)](#)
 1. [Anhang 3 der Verordnung des EDI über das elektronische Patientendossier \(Metadaten\), Gültig ab 15.04.2017](#)
 2. [Anhang 4 der Verordnung des EDI über das elektronische Patientendossier \(Austauschformate\), Anhörungsversion](#)

7.2.5 Akteure und Transaktionen

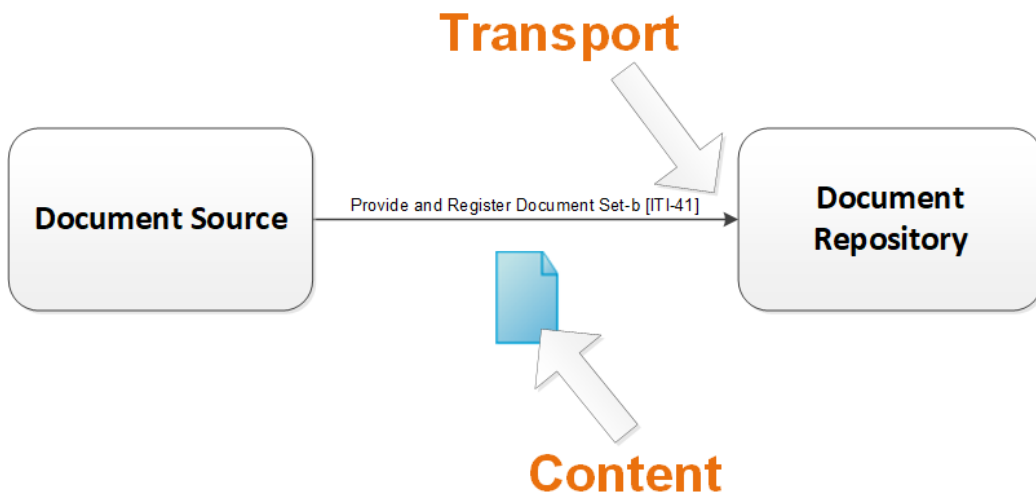

Nachfolgende Grafik zeigt die mit der vorliegenden Spezifikation kombinierbaren IHE Akteure und Transaktionen. Die Grafik zeigt auf, dass die involvierten Akteure ein Dokument auf Basis von CDA-CH erstellen, austauschen und verarbeiten.

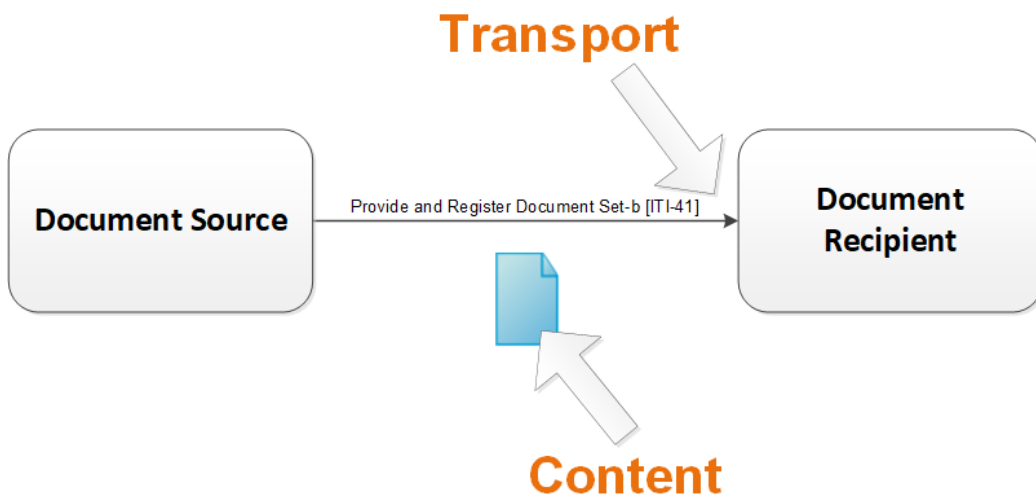

[Abbildung 8] „Share content“ Akteure gemäss IHE

IHE nennt in verschiedenen Inhaltsprofilen die Umsetzung mit den IHE Integrationsprofilen XDS.b, XDR, XDM.

Die IHE Integrationsprofile XDS und XDR realisieren die Interaktion „Share content“ mit der IHE Transaktion „Provide and Register Document Set-b [ITI-41]“, nennen aber die Akteure unterschiedlich:

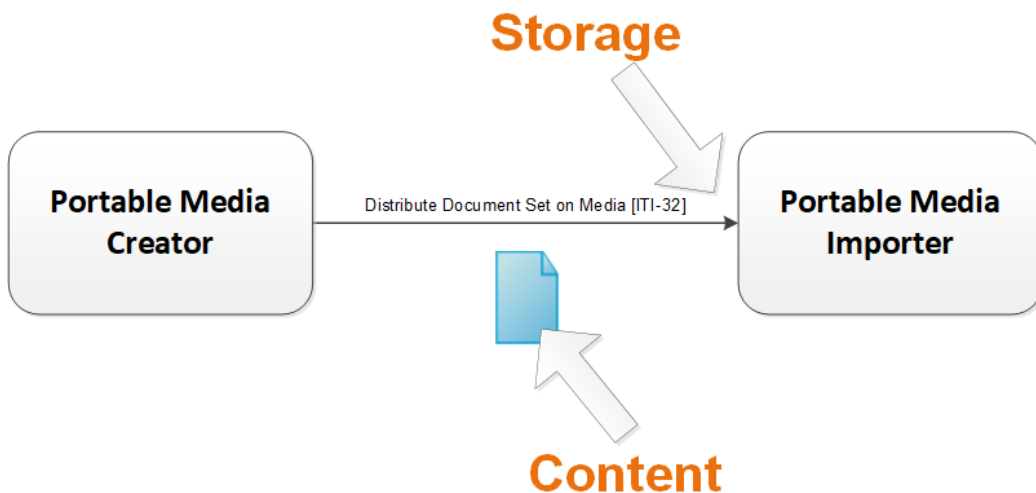

[Abbildung 9] „Share content“ Akteure und Transaktionen (konkret für XDS)

[Abbildung 10] „Share content“ Akteure und Transaktionen (konkret für XDR)

Das IHE Integrationsprofil XDM realisiert die Interaktion „Share content“ mit der IHE Transaktion „Distribute Document Set on Media [ITI-32]“:

[Abbildung 11] „Share content“ Akteure und Transaktionen (konkret für XDM)

Bei allen oben genannten Transaktionen für XDS, XDR und XDM ist der Inhalt des übertragenen Dokuments (Content) identisch und gemäss Kapitel "7 Spezifikation (normativ)" aufgebaut. Für eine genaue Beschreibung der Akteure, Transaktionen und Inhalte verweisen wir auf die IHE Dokumentation [IHE ITI TF-2b] ^[1], Kapitel „3.32 Distribute Document Set on Media“ resp. „3.41 Provide and Register Document Set-b“, da die eigentliche Übermittlung / Speicherung (Share Content) nicht Bestandteil der vorliegenden Spezifikation ist.

7.3 CDA Struktur

7.3.1 CDA Document Level Templates

7.3.1.1 CDA-CH v2.0 - structuredBody

Id	2.16.756.5.30.1.1.10.1.9	Effective Date	2018-04-18
Status	 Active	Version Label	2017
Name	CDA-CHv2.0-structuredBody	Display Name	CDA-CH v2.0 - structuredBody

Description

This document template is used as the primary base for CDA-CH exchange formats. All CDA-CH V2 derivatives, i.e. Swiss exchange formats SHALL use this template by specialisation.

It only specifies the usage of CDA header templates. It requires a structured CDA body, but does not define any CDA body rules. For CDA body rules, see the derived exchange formats.

<p>└ hl7:recordTarget</p>		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> <p>Target patient</p> <p>The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient).</p> <p>Patient identifiers</p> <p>Multiple ids (patient identification number) MAY be declared. If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification. The patient identification number MUST be grouped with the OID of its assigning system. The patient identification number MUST be unique within the system identified by the OID. The declared OID MUST be found in one of the public OID registries, such as oid.refdata.ch (preferred), oid-info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc.</p> 	CDA-CH V2

				<p>OIDs that can't be found in a public OID registry are NOT ALLOWED.</p> <ul style="list-style-type: none"> ▪ Pseudonymizing In special cases, the demographic data of the patient are not allowed to be transmitted or they have to be pseudonymized. While HL7 CDA or its derivatives like CDA-CH or Swiss exchange formats nevertheless require these elements in the XML structure, the affected values MUST be replaced by a nullFlavor of type "MSK" (masked), in order to support the required data format structure and simultaneously to shield the real data.

7.3.1.2 CDA-CH v2.0 - nonXMLBody

Id	2.16.756.5.30.1.1.10.1.12	Effective Date	2018-04-18
Status	 Active	Version Label	2017
Name	CDA-CHv2.0-nonXMLBody	Display Name	CDA-CH v2.0 - nonXMLBody

Description

This document template MAY be referenced or specialized for specific, not further described use cases. CDA-CH V2 derivatives, i.e. Swiss exchange formats SHOULDNT use this template, as they better refer to the document level template requiring a structured body. It only specifies the usage of CDA header templates. It requires a non XML CDA body, but does not define any CDA body rules. For CDA body rules, see the derived exchange formats.

```

Item	DT	Card	Conf	Description	Label
h17:ClinicalDocument		1 ... 1	M	This document template MAY be referenced or specialized for specific, not further described use cases. It only specifies the usage of CDA header templates. It requires a non XML CDA body, but does not define any CDA body rules. For CDA body rules, see the derived exchange formats.	(CDA...ody)

				<p>Conformity rules that are not further modelled in ART-DECOR:</p> <ul style="list-style-type: none"> ▪ XML encoding UTF-8 encoding is required. All CDA-CH V2 documents MUST start with this line: <?xml version="1.0" encoding="UTF-8"?> ▪ Phone numbers Phone numbers MUST be declared in the international format. Dots (.) MUST be used as separators for grouping of number blocks. The minus sign (-) MUST be used as a separator between public and internal telephone numbers. Purpose: Some telephone exchanges - especially in the US, allow direct dial-up of an internal telephone number after the actual connection has been established over the public telephone network. Examples: <telecom value="tel:+41.33.123.45.67"/> <telecom value="tel:+1.987.654.3210-999"/>

Included

from 2.16.756.5.30.1.1.10.2.1 *Patient - recordTarget* (DYNAMIC)

└ h17:recordTarget		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> ▪ Target patient The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient). ▪ Patient identifiers Multiple ids (patient identification number) MAY be declared. 	CDA-CH V2
--------------------	--	---------	---	--	-----------

				<p>If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification.</p> <p>The patient identification number MUST be grouped with the OID of its assigning system. The patient identification number MUST be unique within the system identified by the OID.</p> <p>The declared OID MUST be found in one of the public OID registries, such as oid.refdata.ch (preferred), oid-info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc.</p> <p>OIDs that can't be found in a public OID registry are NOT ALLOWED.</p> <ul style="list-style-type: none"> ▪ Pseudonymizing In special cases, the demographic data of the patient are not allowed to be transmitted or they have to be pseudonymized. While HL7 CDA or its derivatives like CDA-CH or Swiss exchange formats nevertheless require these elements in the XML structure, the affected values MUST be replaced by a nullFlavor of type "MSK" (masked), in order to support the required data format structure and simultaneously to shield the real data.

7.3.2 CDA Header Level Templates

Die nachfolgenden CDA Header Level Templates werden in der Reihenfolge aufgelistet, wie sie von HL7 CDA R2 (2005) resp. in dem davon abgeleiteten XML Schema (POCD_MT000040.xsd) im CDA Dokument erwartet werden. Da es allerdings nicht für jedes Element im CDA Header auch tatsächlich ein Template in CDA-CH gibt resp. es für einzelne Elemente im CDA Header mehrere Templates gibt, hier die entsprechende Reihenfolge der CDA Header Elemente:

1. realmCode: siehe "7.3.2.1 Document_Realm"
2. typeId: Vom HL7 CDA R2 (2005) Standard vorgegebener, fixer Wert. Deshalb kein CDA-CH Template.
3. templateld: siehe "0 Document_Template_Ids_CDA-CH_V2"
4. id: siehe "7.3.2.4 Document_Id"
5. code: siehe "7.3.2.5 Document_Code"
6. title: Wird von den, von CDA-CH abgeleiteten Austauschformaten definiert. Deshalb kein CDA-CH Template.
7. effectiveTime: Einzelner Wert, der das Ausgabedatum des jeweiligen CDA Dokuments enthält. Deshalb kein CDA-CH Template.

8. confidentialityCode: siehe "7.3.2.6 Document_Confidentiality_Code"
9. languageCode: siehe "7.3.2.7 Document_Language"
10. setId: siehe "7.3.2.8 Document_Set_Id_and_Version_Number"
11. versionNumber: siehe "7.3.2.8 Document_Set_Id_and_Version_Number"
12. recordTarget: siehe "7.3.2.9 Patient_-_recordTarget"
13. author: siehe "7.3.5.6 Author_2"
14. dataEnterer: siehe "7.3.2.11 Data_Enterer"
15. informant: siehe "7.3.2.12 CDA_Informant"

```

Item	DT	Card	Conf	Description	Label
hl7:recordTarget		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> Target patient The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient). Patient identifiers Multiple ids (patient identification number) MAY be declared. If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification. The patient identification number MUST be grouped with the OID of its assigning system. The patient identification number MUST be unique within the system identified by the OID. The declared OID MUST be found in one of the public OID registries, 	CDA-CH V2

				such as oid.refdata.ch (preferred), oid-info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc. OIDs that can't be found in a public OID registry are NOT ALLOWED.	
				<ul style="list-style-type: none"> ▪ Pseudonymizing In special cases, the demographic data of the patient are not allowed to be transmitted or they have to be pseudonymized. While HL7 CDA or its derivatives like CDA-CH or Swiss exchange formats nevertheless require these elements in the XML structure, the affected values MUST be replaced by a nullFlavor of type "MSK" (masked), in order to support the required data format structure and simultaneously to shield the real data.

7.3.2.21 Order Reference - inFulfillmentOf

Id	2.16.756.5.30.1.1.10.2.16	Effective Date	2018-04-18
Status	 Active	Version Label	2017
Name	cdach_header_OrderReference	Display Name	Order Reference - inFulfillmentOf

Description

Reference to one or more orders which led to the creation of this CDA document. It SHALL be declared, when the order reference is relevant for some reason. All CDA-CH V2 derivatives, i.e. Swiss exchange formats MUST reference this template.

Context	Parent nodes of template element with id 2.16.756.5.30.1.1.10.2.16
Label	CDA-CH V2
Classification	CDA Header Level Template
Open/Closed	Open (other than defined elements are allowed)

Used by 0 transactions and 4 templates, Uses 0 templates

Used by	as	Name	Version
2.16.756.5.30.1.1.10.9.36	Include 	CDA-CH v2.0 Header Template Compilation (2017)	2018-04-18
2.16.756.5.30.1.1.10.1.12		CDA-CH v2.0 - nonXMLBody (2017)	2018-04-18
2.16.756.5.30.1.1.10.1.14		CDA-CH v2.0 - structuredBody enhanced (2018)	2018-04-18
2.16.756.5.30.1.1.10.1.9		CDA-CH v2.0 - structuredBody (2017)	2018-04-18

Relationship	Specialization: template 2.16.840.1.113883.10.12.109 (2005-09-07)
---------------------	---

Example

Order reference on a CDA-CH V2 (2017) document

```
<inFulfillmentOf>
  <templateId root="2.16.756.5.30.1.1.10.2.16"/>
</inFulfillmentOf>
```

```

<order>
  <id root="9F44AE66-D70B-46DA-89AD-82A51C7A11C6"/>
</order>
</inFulfillmentOf>

```

Example

Order reference to an order created by an ERP system

```

<inFulfillmentOf>
  <templateId root="2.16.756.5.30.1.1.10.2.16"/>
  <order>
    <id root="2.999" extension="AU-20170021987"/>
  </order>
</inFulfillmentOf>

```

7.3.3 CDA Section Level Templates

CDA-CH v2.0 macht gemäss "2.4.3 Abgrenzungen" normative Vorgaben zum CDA Header aber nicht zum CDA Body. Aus diesem Grund werden hier keine CDA Section Level Templates abgebildet.

7.3.4 CDA Entry Level Templates

CDA-CH v2.0 macht gemäss "2.4.3 Abgrenzungen" normative Vorgaben zum CDA Header aber nicht zum CDA Body. Aus diesem Grund werden hier keine CDA Entry Level Templates abgebildet. Die Wiederverwendung von gemeinsam nutzbaren Informationen im CDA Body ist allerdings dringend empfohlen und deshalb sind in [ART-DECOR](#) für wiederverwendbare CDA Entries einige Templates erfasst. Diese können in Austauschformaten referenziert oder spezialisiert werden. Bei Redaktionsschluss von CDA-CH v2.0 sind folgende CDA Entry Level Templates vorhanden (später können weitere hinzukommen):

1. [Inability To Work Observation](#)
2. [Vital Signs Organizer](#)

In jedem Fall ist es Sache der von CDA-CH v2.0 ableitenden Austauschformate, den Inhalt der CDA Entries zu spezifizieren.

7.3.5 Other CDA Templates

Die nachfolgenden CDA Header Level Templates werden in alphabetischer Reihenfolge aufgelistet.

7.3.5.1 Address Information Compilation - eCH-0010

Id	2.16.756.5.30.1.1.10.9.35	Effective Date	2018-04-18

		test	string-length(text()) < 151	
		Message	eCH-0010 restricts the content length to max. 150 characters	
h17:streetName	ADXP	0 ... 1	C	Street names in postal addresses. It can also be the name of a locality, a hamlet, etc. With a maximum length of 150 characters.
	Schematron assert	role	 error	
		see	eCH-0010 V7.0, section 5.13	
		test	string-length(text()) < 151	
		Message	eCH-0010 restricts the content length to max. 150 characters	
h17:houseNumber	ADXP	0 ... 1		House number in postal addresses (including house number additives). With a maximum length of 30 characters.
	Schematron assert	role	 error	
		see	eCH-0010 V7.0, section 5.14	
		test	string-length(text()) < 31	
		Message	eCH-0010 restricts the content length to max. 30 characters	
h17:additionalLocator	ADXP	0 ... 1		Number of addressed apartment. This is occasionally necessary for larger buildings. With a maximum length of 30 characters.
	Schematron assert	role	 error	
		see	eCH-0010 V7.0, section 5.15	
		test	string-length(text()) < 31	
		Message	eCH-0010 restricts the content length to max. 30 characters	
h17:postBox	ADXP	0 ... 1	C	Number of the addressed post box in a maximum length of 8 characters.
	Schematron assert	role	 error	
		see	eCH-0010 V7.0, section 5.16	
		test	string-length(text()) < 9	
		Message	eCH-0010 restricts the content length to max. 8 characters	

hl7:state	ADXP	0 ... 1		Occasionally, additional geographic information must be provided in foreign addresses, in addition to city and country. This element can be used for such cases. It contains superordinate or subordinate information on a city, such as region, province, state or local district. Since it is difficult - especially with foreign addresses - to determine whether an indication is subordinate or subordinate, a separate mapping of superordinate and subordinate indication is omitted.	eCH-0010 V7.0 addressInformation
hl7:city	ADXP	1 ... 1	R	Addressed city (in foreign addresses if necessary including province, etc.). When using the information according to the Swiss Post, the 27-digit city name must be used.	eCH-0010 V7.0 addressInformation
hl7:postalCode	ADXP	1 ... 1	R	Postal code given by Swiss Post or postal code issued by a post office abroad, that can consist of numbers, letters or a combination of both, possibly even special characters.	eCH-0010 V7.0 addressInformation
hl7:country	ADXP	1 ... 1	R	Two-digit, alphanumeric ISO country code according to [ISO 3166-1] of the country in which the address is located. The country defines the conventions for addressing. The country code MUST also be declared for Swiss postal addresses. Caution: Political changes or renaming of countries will result in adjustments to the ISO country list. The length of the feature is 2 characters.	eCH-0010 V7.0 addressInformation
	Schematron assert	role	 error	see	eCH-0010 V7.0, section 5.24.2
		test	string-length(text()) < 3	Message	eCH-0010 restricts the content length to max. 2 characters
	Schematron assert	role	 error	see	eCH-0007
		test	not(hl7:state) or not(upper-case(hl7:country/text()='CH') or (upper-case(hl7:state/text())=('AG', 'AI', 'AR', 'BE', 'BL', 'BS', 'FL', 'FR', 'GE', 'GL', 'GR', 'JU', 'LU', 'NE', 'NW', 'OW', 'SG', 'SH', 'SO', 'SZ', 'TG', 'TI', 'UR', 'VD', 'VS', 'ZG', 'ZH'))

7.3.5.7 CDA-CH v2.0 Header Template Compilation

Id	2.16.756.5.30.1.1.10.9.36	Effective Date	2018-04-18
Status	● Active	Version Label	2017
Name	cdach_other_HeaderTemplateCompilation	Display Name	CDA-CH v2.0 Header Template Compilation

Description

CDA-CH V2 bases on HL7 CDA R2 (2005) and requires either a nonXMLBody or a StructuredBody. This circumstance is modeled in two separate templates but both MUST contain the same header templates. Therefore this template contains all header templates that are equal for all relevant document level templates. CDA-CH V2 derivatives, i.e. Swiss exchange formats MUST use this template by either reference or specialisation.

from 2.16.756.5.30.1.1.10.2.1 *Patient - recordTarget* (DYNAMIC)

hl7:recordTarget		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> ▪ Target patient The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient). ▪ Patient identifiers Multiple ids (patient identification number) MAY be declared. 	CDA-CH V2
------------------	--	---------	---	--	-----------

				<p>If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification.</p> <p>The patient identification number MUST be grouped with the OID of its assigning system. The patient identification number MUST be unique within the system identified by the OID.</p> <p>The declared OID MUST be found in one of the public OID registries, such as oid.refdata.ch (preferred), oid-info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc. OIDs that can't be found in a public OID registry are NOT ALLOWED.</p> <ul style="list-style-type: none"> ▪ Pseudonymizing In special cases, the demographic data of the patient are not allowed to be transmitted or they have to be pseudonymized. While HL7 CDA or its derivatives like CDA-CH or Swiss exchange formats nevertheless require these elements in the XML structure, the affected values MUST be replaced by a nullFlavor of type "MSK" (masked), in order to support the required data format structure and simultaneously to shield the real data.

7.3.5.8 Device Compilation with name

Id 2.16.756.5.30.1.1.10.9.21

Effective Date 2018-04-18

Status	 Active	Version Label	2017
Name	cdach_other_DeviceCompilationWithName	Display Name	Device Compilation with name

Description

Reusable template wherever a device with required name is used in a CDA-CH V2 document. CDA-CH V2 derivatives, i.e. Swiss exchange formats MAY use this template by either reference or specialisation.

A device is either a physical device (e.g. analyzer with which laboratory results are determined) or a software (e.g. laboratory information system, in which laboratory results are documented).

Context	Pathname
Label	CDA-CH V2
Classification	Template type not specified

Legenda: Type L=leaf, S=specializable, A=abstract, D=deprecated. NullFlavors to appear in @nullFlavor attribute instead of @code.

7.4 Vorgaben für die Validierung

7.4.1 Erforderliche Schematron Regeln

Für sämtliche Austauschformate, welche auf CDA-CH V2 (2017) aufbauen muss ein Set an Schematron Regeln mitgeliefert werden. Dieses kann aus ART-DECOR generiert werden. Schematron Regeln aus ART-DECOR bilden alle Struktur-Prüfungen ab, welche im Modell abgebildet werden (vom Datentyp bis zu Kardinalitäten). Wichtige Geschäftsregeln, welche in der Beschreibung des Modells erfasst sind, kann ART-DECOR aber nicht automatisiert in Schematron umwandeln. Dazu ist es notwendig, dass solche Regeln zusätzlich im ART-DECOR Modell als Schematron assert oder report eingetragen werden.

Beispiel:

Für die Rolle des Autors muss das Value-Set gemäss EPDV, Anhang 3 (Metadaten) verwendet werden. Der Eintrag '133932002' (Other Caregiver) muss aber mit einem zusätzlichen Klartext ergänzt werden. Dazu wurde in den Templates Author und Performer der folgende Schematron assert ergänzt:

Test: `not(@code='133932002') or (originalText/text())`

Message: Other Caregivers description MUST be declared in the originalText element.

7.4.2 Veröffentlichung der Schematron Regeln

Die Schematron Regeln müssen der HL7 Benutzergruppe Schweiz zur öffentlich frei verfügbaren Publikation im dafür vorgesehenen SourceForge Repository (im Folgenden SVN genannt) abgegeben werden. Das SVN Repository wird durch die HL7 Benutzergruppe Schweiz gepflegt. Das technische Komitee der HL7 Benutzergruppe Schweiz ist zuständig für den Inhalt des Repositories und verwaltet auch die Schreibrechte.

SVN Repository: <https://svn.code.sf.net/p/hl7ch/code/trunk/>

SourceForge Projekt: <http://www.sourceforge.com/projects/hl7ch>

7.4.3 Versionierung der Schematron Regeln

Die Versionierung der Schematron Regeln obliegt dem Herausgeber eines CDA-CH Austauschformats. Zugelassen ist die Angabe je einer Haupt- und Unterversion pro Datei in Form einer natürlichen Zahl (Major.Minor). Beispiel: 2.11

Die Revisionsnummer wird durch das SVN Repository vergeben.

7.4.4 Kontinuität

CDA-CH Austauschformate Dokumentvorlagen (Templates; Set von Schematronregeln) sollen rückwärtskompatibel implementiert werden. Ein Bruch der Rückwärtskompatibilität ist - wenn immer möglich - zu vermeiden. Falls sich ein Bruch der Rückwärtskompatibilität nicht vermeiden lässt, ist dies ausschliesslich in Hauptversionen (neue Major Version) zugelassen.

Hinweis: CDA-CH V2 (2017) ist nicht 100% rückwärtskompatibel zu CDA-CH V1.2 (2009).

7.4.5 Metadaten zu den Schematron Regeln

Der Herausgeber eines CDA-CH Austauschformats muss die Schematron Regeln mit einer Hauptkategorie und einer Unterkategorie deklarieren. Diese Angaben werden für den Aufbau der Baumstruktur im SVN Repository verwendet und dürfen max. 20 Zeichen umfassen. Als Sonderzeichen sind `_` und `-` zugelassen. Leerzeichen sind nicht erlaubt. Die Angaben müssen innerhalb des jeweiligen Astes im SVN Repository eindeutig sein. In Streitfällen entscheidet endgültig der Vorstand der HL7 Benutzergruppe Schweiz resp. eine durch diesen Vorstand dazu ernannte Stelle.

Beispiele:

- Firma\Produkt
- Projekt\Formular

7.4.6 Pfadangaben in Schematron Regeln

Werden in den Schematron Dateien wiederverwendbare Entities referenziert, muss die Pfadangabe mittels relativen Pfaden erfolgen und der Verzeichnisstruktur im SVN Repository entsprechen.

7.4.7 Baumstruktur im SVN Repository

Der Aufbau der Baumstruktur im SVN Repository erfolgt folgendermassen:
schematrons/Hauptkategorie/Unterkategorie/Version/

Unterhalb dieser Kategorie ist der Herausgeber einer CDA-Vorlage frei in der Definition von Unterordnern.

Beispiele:

- schematrons/HL7.ch/CDA-CH/v1.2/cda-ch.sch
- schematrons/HL7.ch/CDA-CH/v2.0/cda-ch.sch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-dis.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-mtp.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-padv.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-pml.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-pre.ch

8 Validierung, Technologien und Tools

Dieser Themenbereich wurde zwecks Wiederverwendbarkeit in verschiedenen Austauschformaten basierend auf CDA-CH in ein eigenständiges Dokument ausgelagert. Es wird auf das Whitepaper [CDA-CH - Validierung, Technologien und Tools](#) verwiesen.

Ausserdem enthält auch die Spezifikation [CDA-CH-II \(2011\)](#) ein Schematron Tutorial und Informationen zu Best Practices.

Hinweis: Obschon CDA-CH-II (2011) mit der Genehmigung von CDA-CH V2 (2017) ausser Kraft gesetzt wird, bleiben dort rein informativ lesenswert:

- Kapitel "8 Schematron Tutorial"
- Kapitel "9 Schematron Best Practices"

8.1 Beispieldokumente und Schematronregeln

Beispieldokumente und Schematronregeln sind unter folgenden Links im Open Source Repository der HL7 Benutzergruppe Schweiz veröffentlicht:

- [Schematronregeln](#)
 - Beispieldokumente:
 - CDA-CH V2 Fallbeispiel "Hüftgelenkersatz"
 - [Deutsch](#)
 - [Französisch](#)
 - CDA-CH V2 Best practices
 - [Englisch](#)
 - [Weitere Beispieldokumente](#)
- Hinweis: Diese basieren teilweise auf CDA-CH V1.2 (2009) resp. CDA-CH-II (2011) und sind nicht vollständig auf CDA-CH V2 (2017) migriert.
