Abrogation de spécifications précédentes

Les spécifications précédentes ci-après sont abrogées suite à l'approbation de la présente spécification :

- CDA-CH V1.2 du 27 janvier 2009
- CDA-CH II V1.2 du 1er octobre 2011

Statut et but du document

Le présent document définit la norme technique et sémantique pour l'échange électronique et structuré des données décrites concernant le dossier électronique du patient (DEIP).

Egalité entre les femmes et les hommes

Afin de faciliter la lecture de ce document et sauf mention contraire, le masculin générique est utilisé pour désigner les deux sexes.

Version électronique

Le contenu de ce document peut aussi être consulté sur le [Wiki](#).

La spécification normative, y compris les règles Schematron, est publiée sur [Art-Decor](#).

1 Resumé

Un patient qui doit suivre un traitement passe en règle générale dans plusieurs établissements (parfois nombreux). Quantité de documents médicaux sont échangés durant le processus de traitement du patient. L'exploitation isolée des systèmes d'information est non seulement à l'origine de saisies multiples, de ruptures de médias et d'autres effets négatifs, mais elle entraîne aussi et surtout une charge inutile en termes de personnel. Aujourd'hui, le papier est encore souvent utilisé comme média et le patient comme coursier. Mais des améliorations sensibles sont possibles grâce aux moyens disponibles actuellement dans le domaine des technologies de l'information et de la communication (TIC).

Exemples :

- Distribution automatique des documents sur la base des destinataires mentionnés dans l'en-tête du document
- Traitement électronique des données utiles
 - Les systèmes d'information émetteurs peuvent générer automatiquement des contenus à partir de leurs données.
 - Les systèmes d'information récepteurs peuvent actualiser automatiquement leurs données sur la base des documents reçus par voie électronique.
 - Si besoin, il est possible de lancer des alertes ou des processus.

Il est nécessaire de recourir à des normes afin de permettre une application uniforme et défendable sur le plan économique de l'échange électronique de documents médicaux. Le cas échéant, plusieurs systèmes et organisations autonomes peuvent en effet communiquer les uns avec les autres sans arrangements préalables. La spécification CDA-CH a justement été élaborée à ces fins et doit servir d'instrument permettant d'augmenter l'interopérabilité entre les prestataires du système de santé suisse. CDA-CH V2 (2017) offre une conformité avec les normes eCH au niveau des adresses postales et des données personnelles ainsi qu'avec la LDEP (annexe 3 : « Métadonnées » et annexe 4 : « Formats d'échange »). Il est ainsi garanti que les documents CDA-CH V2 puissent être intégrés de manière optimale dans les processus en lien avec le dossier électronique du patient (DEP). L'utilisation dans le DEP ne représente cependant que l'un des nombreux scénarios plaident en faveur de CDA-CH V2. Cette spécification peut aussi être et est utilisée en dehors du DEP.

2 Introduction

2.1 Situation initiale et motivation

Élaborée en 2009, la spécification CDA-CH constitue le fondement des formats d'échange en Suisse. Elle n'a pas été actualisée depuis sa création. La présente révision vise en particulier à adaptation la spécification à des prescriptions découlant de [la loi fédérale sur le dossier électronique du patient](#). Des directives tirées des normes eCH relatives aux adresses postales et aux données personnelles ont par ailleurs également été prises en considération. La proposition de mise en œuvre adoptée au sein du comité de pilotage eHealth Suisse prévoit un format d'échange unifié pour les informations mentionnées ici. Cela permet de garantir un support à l'échange d'informations entre toutes les personnes et institutions participantes. Les documents créés selon ce format d'échange sont par ailleurs également compatibles avec un classement dans le DEP.

2.2 Statut et but du document

Le présent document décrit le contenu de « CDA-CH 2017 (specification)/fr » et définit ainsi un format d'échange unifié d'informations dans le système de santé Suisse. Il contient le texte tel qu'il a été élaboré par l'équipe du projet et comporte la spécification normative basée sur la norme HL7 CDA. Après consultation à large échelle, eHealth Suisse recommande d'appliquer cette spécification comme norme nationale.

2.3 Lecteurs concernés

Le présent guide d'implémentation s'adresse aux médecins ainsi qu'aux prestateurs de soins, aux producteurs et aux fournisseurs de logiciels et de systèmes ainsi qu'aux autres professionnels de la santé qui traitent le présent sujet.

Les spécialistes ICT trouveront la spécification au chapitre "7 Spécification (normative)" et des références à des documents traitant des technologies et des outils de validation ainsi que d'autres documents d'aide (« Supporting Documents ») au chapitre "8 Validation, technologies et outils". Une description des cas d'application est proposée au chapitre "5 Cas d'application".

2.4 Objectifs et limitation

2.4.1 Interopérabilité comme condition préalable

Une implémentation judicieuse des déclarations électroniques suppose une interopérabilité des systèmes participants. Dans ce domaine, le « HL7 EHR Interoperability Work Group » a fait la distinction suivant^[Remarque 1] :

- interopérabilité technique
- interopérabilité sémantique
- interopérabilité de processus

Les systèmes interopérables au niveau technique sont des systèmes qui peuvent échanger des données entre eux. L'interopérabilité sémantique signifie que l'information peut être correctement interprétée par le système récepteur. L'interopérabilité de processus traite de l'intégration des systèmes dans le déroulement du travail.

Le présent format d'échange comporte les spécifications concernant l'interopérabilité sémantique des systèmes dans le contexte des « CDA-CH 2017 (specification)/fr ».

L'interopérabilité technique est nécessaire pour que l'interopérabilité sémantique puisse être abordée. Elle couvre notamment le mécanisme de transport des déclarations. Le format d'échange ne définit aucune disposition en matière de mécanismes de transport, mais fournit dans le chapitre "0 Mécanisme de transport" des recommandations pour la mise en œuvre là où elles sont judicieuses. A partir de la page 3, le chapitre "5 Cas d'application" présente des cas d'application pertinents et fournit des indications pour une implémentation appropriée. Ces indications se fondent sur des réflexions en matière d'interopérabilité de processus. Les dispositions à ce sujet et le traitement approfondi de ce thème ne font cependant pas l'objet du guide d'implémentation.

2.4.2 Objectifs

Automatisation :

- Automatisation de la mise à disposition des données du côté des fournisseurs de données et ainsi, élimination des erreurs qui peuvent aujourd'hui se produire lors du traitement manuel des informations.
- Automatisation du traitement des données du côté des professionnels de la santé et ainsi, réduction des charges engendrées par les processus et déroulements suivis jusqu'à présent.

Harmonisation, interopérabilité et protection des investissements :

- Garantie de la possibilité de réutiliser des éléments identiques dans les différents formats d'échange et ainsi, réduction des charges de développement pour de nouvelles interfaces.
- Harmonisation des informations dans l'en-tête CDA (header) pour que celles-ci puissent être réutilisées sans changement dans les différents formats d'échange (dérivés de CDA-CH).

2.4.3 Limites

La présente spécification se concentre sur la structuration des informations administratives dans un document HL7 CDA (en-tête CDA) telles qu'elles doivent être appliquées lorsqu'elles sont utilisées en Suisse. Il s'agit là par exemple de la langue, de l'auteur, d'une éventuelle référence à un document qui doit être remplacé ou à un mandat qui serait à l'origine de l'élaboration du nouveau document ainsi que d'autres personnes ou organisations participantes (telles que contacts en cas d'urgence, assurances, employeur, signataires légaux, etc.). Le chapitre "7 Spécification (normative)" offre une vue d'ensemble plus précise.

Cette spécification constituant le fondement de l'échange de documents structurés, il est nécessaire de se baser sur une structuration des données médicales. Mais il ne s'agit pas pour autant d'aborder cette structuration proprement dite, car celle-ci fait partie intégrante des différents formats d'échange qui sont dérivés de CDA-CH pour les cas d'application correspondants (tels que, par exemple, dossier de vaccination électronique, cybermédication ou rapports de laboratoire généraux).

Le Wiki de HL7 Allemagne offre une vue d'ensemble plus précise des différentes variantes dans le corps CDA (CDA body) : [CDA body dans le rapport médical V2](#).

Les thèmes suivants ne sont pas abordés par le présent format d'échange :

- Documents avec données non structurées (CDA body).
- Structuration effective de données médicales (CDA body).
- Transmission effective des documents (communication).
- Définition de processus rendus possibles auprès du récepteur par le traitement électronique des données structurées.

2.5 Principes et technologies de base

Les cas d'application liés au « CDA-CH 2017 (specification)/fr » peuvent être mis en œuvre selon les recommandations de la stratégie eHealth Suisse. Les informations électroniques devraient être accessibles dans le dossier électronique du patient et permettre aux participants de les traiter par voie électronique. Le présent guide d'implémentation est entièrement basé sur les profils d'intégration IHE et la norme HL7 Clinical Document Architecture (CDA). Voir aussi chapitre "3.1 Rapport à d'autres normes et guides d'implémentation".

2.6 Responsabilités

Les éditeurs approuvent expressément l'utilisation du présent guide sans droits de licence, ni redevances pour la transmission de « CDA-CH 2017 (specification)/fr » et indiquent que cette décision a été prise avec l'accord de tous les participants à l'élaboration de ce format d'échange. L'utilisateur est responsable de son utilisation du guide.

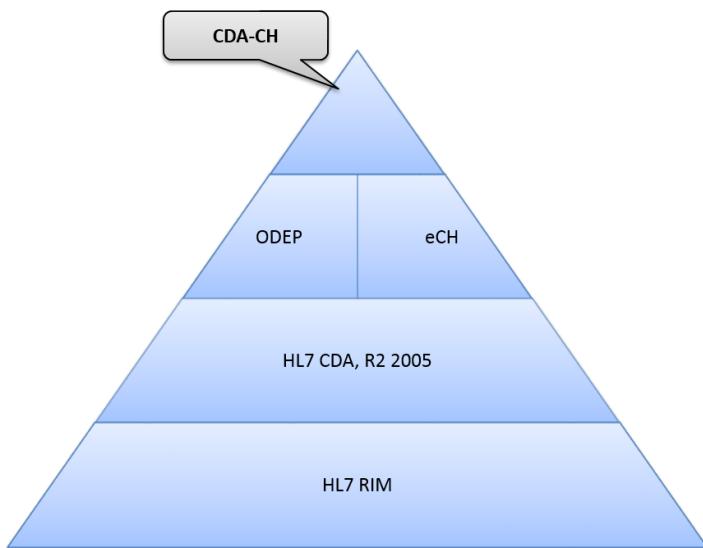

Dans cette spécification, le codage des différentes informations se base sur des domaines de valeurs (value sets) définis et des terminologies qui définissent les codes acceptés.

L'organe de coordination Confédération-cantons eHealth Suisse est responsable de la publication des domaines de valeurs (value sets).

3 Bases formelles

3.1 Rapport à d'autres normes et guides d'implémentation

La présente spécification repose sur les bases suivantes:

[Illustration 1] *Rapport à d'autres normes - Pyramide de référence*

3.1.1 Profils d'intégration IHE

IHE (Integrating the Healthcare Enterprise) est une initiative internationale visant à améliorer l'échange électronique de données entre systèmes informatiques dans le système de santé. IHE élabore des profils d'intégration qui définissent comment implémenter des normes existantes (par exemple : HL7, DICOM) dans des processus de travail afin que les systèmes d'informations des différents producteurs soient interopérables et puissent communiquer les uns avec les autres sans pertes d'informations. IHE a été lancé en 1998 aux Etats-Unis; l'Europe et l'Asie ont suivi peu après. IHE Suisse a été fondé en 2010.

Pour ce format d'échange les bases décrites brièvement dans le chapitre "0 Tutoriel pour profils d'intégration IHE" sont importantes.

Les documents élaborés sur la base des profils de contenu IHE (Content Profiles) peuvent être classés dans un dossier (Folder) de l'architecture IHE Cross-enterprise Document Sharing (XDS). Ce profil d'intégration IHE est la base pour le dossier patient électronique distribué (EPD) en Suisse. Les profils de contenu IHE référencées dans le présent format d'échange se basent sur le standard de base pour les contenus de documents HL7 CDA R2.

3.1.2 HL7 V3

HL7 (abréviation de « Health Level Seven ») désigne une norme internationale d'échange électronique de données dans le système de santé. Le chiffre « 7 » se rapporte à la septième couche du modèle OSI et précise ainsi que la norme HL7 standardise avant tout la communication au niveau des applications. HL7 a été défini en 1987 aux Etats-Unis. Aujourd'hui, une organisation commerciale (HL7.org) propose la norme HL7 en versions 2.x et 3.0. HL7.org est également l'organisation faîtière de tous les utilisateurs HL7 et coordonne leurs activités au niveau international. Les « HL7 Affiliates » sont aujourd'hui présents dans plus de 30 pays, dont la Suisse.

Le présent guide d'implémentation se base sur HL7 version 3. Basée sur du XML, cette 3e version repose sur un modèle d'objet important nommé « Reference Information Model » (RIM). Ce modèle constitue le fondement de spécifications telles que la Clinical Document Architecture (CDA) et donc également du présent guide d'implémentation.

3.1.3 HL7 Clinical Document Architecture (CDA)

La norme HL7 Clinical Document Architecture est une norme officielle ANSI et HL7 dont la version actuellement valable R2 date de 2005. Il s'agit là de l'un des plus de 30 domaines différents de la famille de normes HL7 V3 élaborée en suivant une orientation objet et documentée dans le HL7 Reference Information Model (RIM).

3.2 Législation relative au dossier électronique du patient (LDEP)

Le DEP doit permettre de renforcer la qualité du traitement médical, d'améliorer les processus de traitement, d'augmenter la sécurité des patients, de rendre le système de santé plus efficace et d'étoffer les compétences des patients en ce qui concerne leur santé.

En vigueur depuis le 15 avril 2017, la loi fédérale sur le dossier électronique du patient (LDEP) règle les conditions cadre relatives à l'introduction et à la diffusion du DEP. Les bases légales de la LDEP sont par conséquent applicables à la présente spécification. La loi, les ordonnances, les rapports explicatifs et autres documents peuvent être demandés auprès de l'OFSP en cliquant sur le ce [lien](#). Le concept OID, des recommandations et d'autres documents d'[eHealth Suisse](#) sont également pertinents dans ce cadre.

3.3 Traductions

Cette version du document est disponible en allemand et en français.

4 Définition des termes

Les termes utilisés dans ce document correspondent aux définitions du [glossaire d'eHealth Suisse](#).

5 Cas d'application

Les cas d'application représentés ici (UC = Use Case) se rapportent à des exemples tels qu'ils se présentent aujourd'hui aux différents acteurs du système de santé suisse concernés par la thématique présent. Certains de ces cas d'application ne sont possibles que si toutes les informations pertinentes sont interopérables et peu-vent circuler grâce à des mécanismes d'importation et d'exportation.

L'objectif est d'une part la mise à disposition des informations sur l'état de santé d'un patient pour les personnes impliquées dans la voie de traitement sous une forme lisible par l'homme. D'autre part des processus doivent être optimisés dans les systèmes informatiques par le traitement électronique de ces informations. Il en découle les cas d'application décrits ci-après.

5.1 Introduction

Cette spécification sert de support à l'échange électronique de documents médicaux. La notion volontairement large de « documents médicaux » permet d'appliquer ces directives à des situations très diverses du quotidien médical et en particulier dans le cadre de la communication avec des services d'autres établissements. La grande variété des documents est présentée au moyen de la liste d'exemples, non exhaustive, suivante :

Type de document	Objectif	Exemples
Rapport médical	Rendre compte à un service participant au traitement du déroulement du traitement	Rapport de sortie / rapport final, rapport de transfert à un service assurant la suite du traitement, rapport intermédiaire relatif à un traitement en cours
Mandat	Adopter une mesure en lien avec le traitement d'un patient	Transfert vers un service stationnaire ou ambulatoire pour poursuivre le traitement (p. ex., hospitalisation), mandat pour avis diagnostique ou thérapeutique, autres prescriptions à l'intention de services participant au traitement : soins à domicile, physiothérapie, etc., ordonnance
Rapport sur des aspects partiels d'un traitement	Rendre compte de certains aspects partiels d'un traitement, souvent en rapport avec l'exécution de mesures thérapeutiques ou diagnostiques.	Rapport d'opération, rapports de laboratoire ou synthèse des rapports de laboratoire, rapport de radiologie, rapport de pathologie
Rapports de soins	Rendre compte des soins dispensés dans le cadre d'un traitement, d'une thérapie et du suivi d'un patient.	Rapport de soins, rapport de traitement de physiothérapie, etc.
etc.		

[Tableau 1] Liste d'exemples des documents médicaux

L'échange de documents médicaux peut poursuivre différents objectifs :

- dans le cas d'un rapport médical, il sert à échanger des informations sur les données tirées des antécédents médicaux d'un patient entre l'expéditeur et le destinataire d'un document.

- Lorsqu'il s'agit d'un mandat, il permet au destinataire d'un document d'adopter des mesures supplémentaires en lien avec le traitement d'un patient.

La plupart du temps, les documents médicaux sont subdivisés en plusieurs paragraphes et se distinguent par leur titre. Dans ce cadre, chaque paragraphe correspond à une entité d'information ou à un aspect de l'information, comme le démontrent les exemples ci-après. La valeur d'une entité ne se révèle cependant souvent que dans le contexte global d'un document. Les sections ayant des descriptions semblables ou identiques n'ont par conséquent pas toujours le même sens. Par exemple, la liste des diagnostics figurant dans un rapport d'opération ne se recoupe souvent pas avec la liste des diagnostics énumérés dans le rapport de sortie ultérieur du même patient.

L'échange de documents constitue généralement un élément d'un *workflow*. Il arrive souvent que plusieurs documents se référant les uns aux autres soient échangés dans le cadre d'un suivi médical. Ainsi, le rapport d'un examen diagnostic traitera par exemple des questions qui ont été formulées dans le mandat ayant donné lieu à cet examen. L'objet du présent document n'est pas de fournir des recommandations sur la manière d'implémenter des suivis médicaux, mais d'alléger et de simplifier l'intégration de *workflows* électroniques grâce aux définitions de cette spécification. Un résumé de l'exemple détaillé du cas « Prothèse de hanche » CDA-CH V1 (2009) est fourni ci-après pour représenter l'organisation possible des documents médicaux.

Les exemples de cas nommés dans les sous-chapitres suivants ont été inventés librement et n'ont aucune prétention didactique. Ils pourraient se dérouler comme décrit et servent par conséquent à illustrer la situation. Ceci s'applique également aux documents mentionnés, dont le contenu est adapté à l'exemple de cas.

5.2 Storyboard « Prothèse de hanche »

Cet exemple de cas a uniquement pour objectif d'illustrer une implémentation possible de la présente spécification et ne doit bien évidemment pas être considéré comme une directive.

Un patient de 70 ans prend contact avec son médecin de famille car il souffre de douleurs à l'effort au niveau de sa hanche droite depuis longtemps, mais ces douleurs ont considérablement augmenté ces derniers mois. Sur la base des antécédents et du statut clinique du patient, le médecin de famille pose un diagnostic préliminaire d'arthrose de la hanche droite qui serait à l'origine de ces douleurs. Le médecin de famille décide de confirmer ses soupçons au moyen d'un examen radiologique de la hanche. Comme il n'effectue pas lui-même ce type d'examens, il adresse son patient à un institut radiologique externe au moyen d'un formulaire et fixe directement un rendez-vous. Les images de l'examen ainsi qu'un rapport radiologique avec évaluation par le spécialiste en radiologie sont envoyés au médecin de famille peu après l'examen.

Lors de la consultation suivante, le médecin de famille discute de la situation avec le patient. Ensemble, ils prennent la décision de présenter le patient à un spécialiste en orthopédie afin de discuter avec lui des options thérapeutiques. Le médecin de famille rédige une fiche de liaison qui synthétise le déroulement de la maladie jusqu'à ce jour ainsi que les résultats de l'examen et transmet cette fiche avec les radiographies au cabinet médical de l'orthopédiste. Ce dernier, qui a consulté au préalable le rapport et les radiographies transmis, recommande au patient une opération avec pose d'une endoprothèse de la hanche. Le patient déclare accepter la proposition. L'orthopédiste informe le médecin de famille de cette décision et lui demande d'organiser son hospitalisation et de procéder aux examens de laboratoire préopératoires dans son cabinet médical.

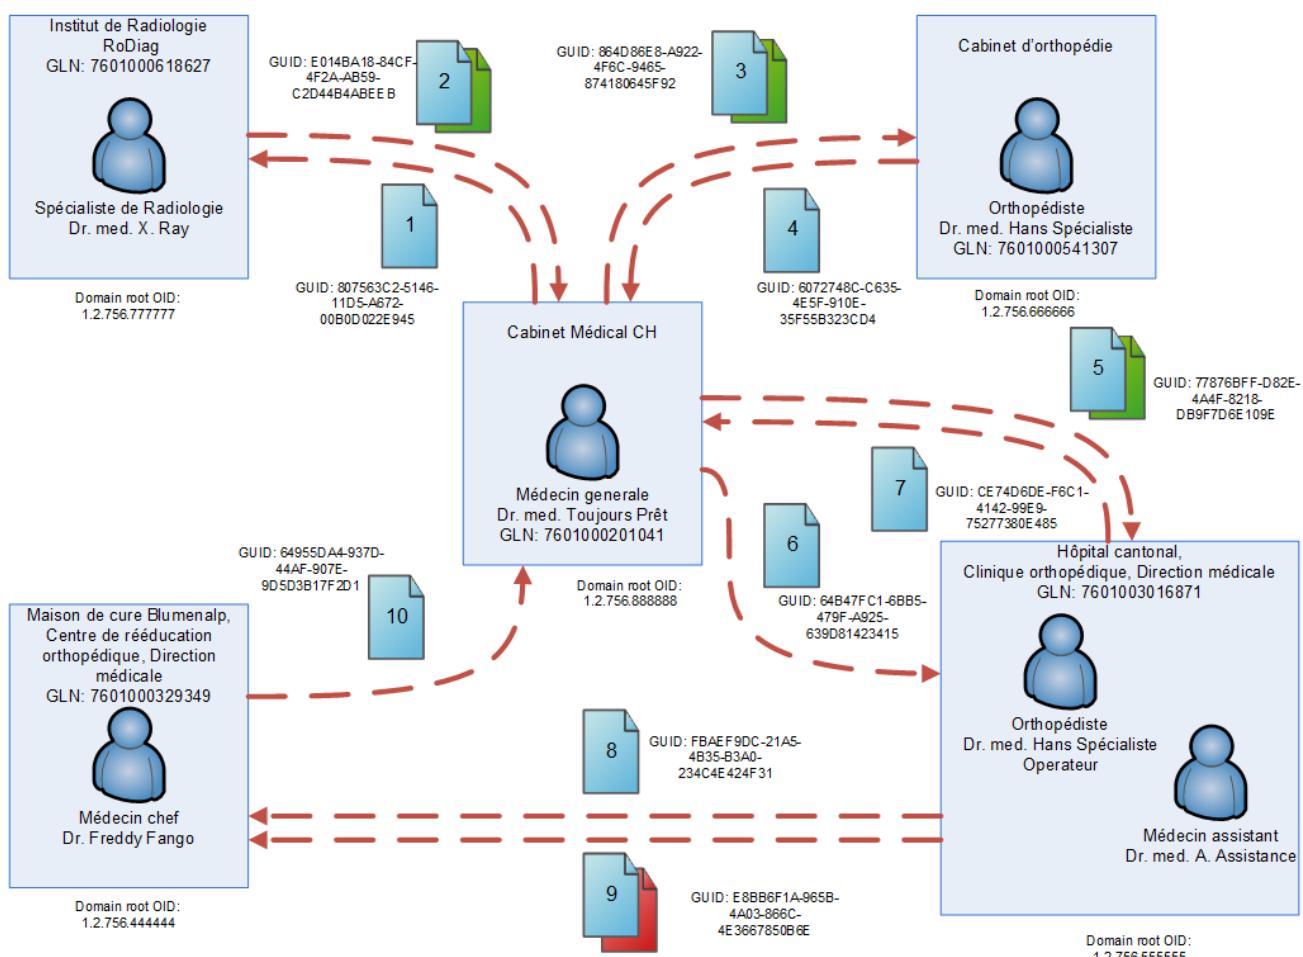

Peu avant son entrée à l'hôpital, le patient a rendez-vous avec son médecin de famille afin de procéder aux analyses de laboratoire nécessaires avant l'opération. Le médecin de famille transmet les valeurs de laboratoire à la clinique où elles sont enregistrées dans le dossier électronique du patient. Pendant l'opération, l'orthopédiste peut consulter les radiographies de la hanche. La pose de l'endoprothèse est contrôlée pendant l'intervention au moyen d'un arceau mobile. Des radiogra-

phies de contrôle de la hanche sont à nouveau réalisées à la clinique après l'opération. L'orthopédiste documente le déroulement de l'opération et donne des instructions au sujet de la suite du traitement dans son rapport d'opération. Une copie de ce rapport d'opération est envoyée au médecin de famille.

Après un séjour d'une semaine à l'hôpital, le patient peut être admis dans un établissement de rééducation stationnaire. La direction médicale de l'établissement en question est informée du déroulement de la maladie et de l'opération grâce à une lettre récapitulative de sortie. Le rapport est accompagné d'une synthèse des résultats de laboratoire, d'une copie des radiographies et d'une copie du rapport d'opération. Le médecin de famille reçoit également une copie du rapport de sortie.

Une fois la rééducation du patient terminée, la clinique de rééducation rédige de son côté un rapport à l'attention du médecin de famille avec copie à l'orthopédiste. Le traitement se termine par la consultation finale auprès du médecin de famille.

Workflow documentaire pour l'exemple de cas « prothèse de la hanche »

[Illustration 2] Workflow documentaire pour l'exemple de cas « prothèse de la hanche »

5.2.1 UC 1-1 : prescription pour diagnostic radiologique

Dans ce cas, un patient est adressé par son médecin à un service spécialisé pour examen radiologique. Il s'agit là de confirmer une date possible pour un rendez-vous. Le rapport de radiologie y relatif fera référence à la lettre émanant du médecin prescripteur. Dans l'exemple de cas ci-dessus, il s'agit du mandat confié par le médecin de famille à l'institut de radiologie afin de procéder à un ex-

amen radiologique.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.1 Instruction pour un diagnostic radiologique »
- Électronique : [1-Prescription pour diagnostic radiologique.xml](#)

5.2.2 UC 1-2 : retour du rapport de radiologie

Ce document contient le rapport de l'examen radiologique commandé auparavant et fait référence à la lettre émanant du médecin prescripteur. Dans l'exemple de cas ci-dessus, il s'agit de l'envoi en retour des images obtenues ainsi que du rapport du radiologue au médecin de famille.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.2 Réponse - résultats de radiologie »
- Électronique : [2-Retour du rapport de radiologie.xml](#)

5.2.3 UC 1-3 : transfert pour avis du médecin spécialiste

Un patient est adressé par son médecin de famille à un médecin spécialiste pour avis. Dans l'exemple de cas ci-dessus, il s'agit de la lettre du médecin de famille à l'orthopédiste avec les radiographies et une synthèse des antécédents du patient et des rapports obtenus.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.3 Transfert pour avis consultatif par le médecin spécialiste »
- Électronique : [3-Transfert pour avis du médecin spécialiste.xml](#)

5.2.4 UC 1-4 : rapport de consultation

Rapport de consultation du médecin spécialiste au médecin de famille Ce document contient le rapport de l'examen radiologique commandé auparavant et fait référence à la lettre émanant du médecin prescripteur. Dans l'exemple de cas ci-dessus, il s'agit du rapport médical de l'orthopédiste au médecin de famille avec l'évaluation du spécialiste et une description de la suite du traitement (OP).

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.4 Rapport de consultation »
- Électronique : [4-Rapport de consultation.xml](#)

5.2.5 UC 1-5 : hospitalisation régulière

Hospitalisation d'un patient par le médecin de famille pour un traitement stationnaire dans une clinique. Dans l'exemple de cas ci-dessus, il s'agit de la demande du médecin de famille à l'hôpital afin que le patient soit opéré.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.5 Procédure régulière d'admission à l'hôpital »
- Électronique : [5-Hospitalisation régulière.xml](#)

5.2.6 UC 1-6 : résultats des examens préopératoires

Transmission à l'hôpital des résultats obtenus dans le cabinet du médecin de famille avant l'hospitalisation. Dans l'exemple de cas ci-dessus, il s'agit des résultats actuels des examens physiques et de la transmission des résultats des analyses de laboratoire du médecin de famille à l'hôpital.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.6 Résultats d'examen préopératoires »
- Électronique : [6-Résultats des examens préopératoires.xml](#)

5.2.7 UC 1-7 : rapport d'opération

Le chirurgien documente les interventions réalisées sous la forme d'un rapport d'opération. Il s'agit là de la documentation de l'opération effectuée pour les dossiers de l'hôpital. Des copies de ce document sont généralement envoyées aux établissements qui participent directement au traitement, à savoir au médecin qui a attribué le mandat ainsi que, le cas échéant, à d'autres établissements impliqués dans le traitement. Dans l'exemple de cas ci-dessus, il s'agit du rapport d'opération de l'orthopédiste au médecin de famille.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.7 Rapport d'opération »
- Électronique : [7-Rapport d'opération.xml](#)

5.2.8 UC 1-8 : bref rapport à la sortie de l'hôpital

Ce bref rapport peut être directement confié au patient à sa sortie de l'hôpital et sert d'orientation générale au médecin qui poursuivra le traitement. Dans l'exemple de cas ci-dessus, il s'agit d'une information générale de l'hôpital au médecin qui poursuivra le traitement dans le centre de rééducation.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.8 Compte-rendu récapitulatif lors de la sortie de l'hôpital »
- Électronique : [8-Bref rapport à la sortie de l'hôpital.xml](#)

5.2.9 UC 1-9 : rapport de sortie de l'hôpital

Synthèse du dossier du patient en rapport avec le traitement actuel. Ce document doit permettre une vue d'ensemble des faits pertinents pour le traitement. Une copie du document est généralement transmise au médecin qui a attribué le mandat et, le cas échéant, à d'autres établissements impliqués dans le traitement. Dans l'exemple de cas ci-dessus, il s'agit de la lettre de transfert à la clinique de rééducation (y compris radiographies postopératoires avec endoprothèse totale et synthèse des résultats de laboratoire) avec copie au médecin de famille.

Exemples d'implémentation :

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.9 Rapport de sortie d'hôpital »
- Électronique : [9-Rapport de sortie de l'hôpital.xml](#)

5.2.10 UC 1-10 : rapport de sortie de la clinique de rééducation

Rapport sur le déroulement de la rééducation, avec copie à certains établissements impliqués dans le traitement. Dans l'exemple de cas ci-dessus, il s'agit de la lettre de sortie de la clinique de rééducation au médecin de famille avec copie à l'orthopédiste.

Exemples d'implémentation :

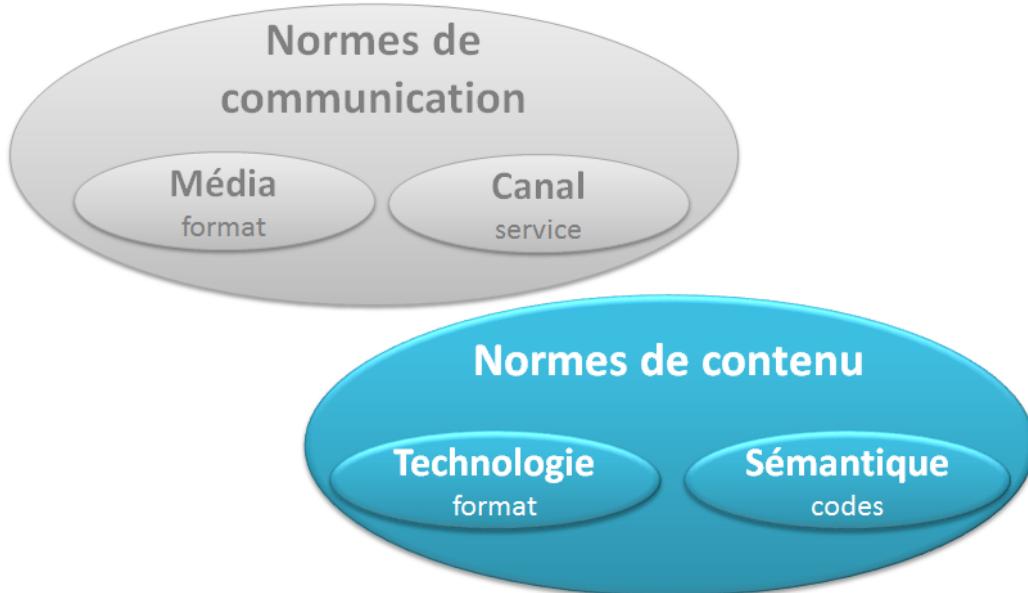

- Papier/PDF : [CDA-CH V1.2 \(2009\)](#). Cf. chapitre « 12.7.10 Rapport de sortie de la clinique de rééducation »
- Électronique : [10-Rapport de sortie de la clinique de rééducation.xml](#)

6 Recommandations

Ce chapitre contient des recommandations utiles en vue d'une harmonisation. Les recommandations citées ci-après peuvent aussi être assimilées à des exemples de « best practises ». Elles ne sont pas normatives et, de ce fait, non contraignantes.

6.1 Méchanisme de transport

Les cas d'applications décrites ci-dessus nécessitent une communication entre les applications à l'émetteur et le récepteur. Lorsque la mise en œuvre, les informations médicales (contenu) et le transport de ces informations (communication) sont à distinguer.

[Illustration 3] *Communication vs contenu*

Le présent document apporte des spécifications sur le contenu. La spécification de la voie de transport ne fait cependant pas partie intégrante de ce document.

6.1.1 Recommandation sur le mécanisme de transport

Le contenu (Content) spécifié par le présent document doit être enrichi de métadonnées (informations sur le type, le contenu, l'auteur, le destinataire, le patient, etc.) et transmis sous forme de paquet (document plus métadonnées) via un canal sécurisé. Les transactions suivantes du [IHE IT Infrastructure Technical Framework](#) peuvent servir à cet effet :

- Cross-Enterprise Document Media Interchange (XDM)
 - Distribute Document Set on Media [ITI-32]
- Cross-Enterprise Document Reliable Interchange (XDR)
 - Provide and Register Document Set-b [ITI-41]
- Cross-Enterprise Document Sharing (XDS.b)
 - Provide and Register Document Set-b [ITI-41]
 - Registry Stored Query [ITI-18]
 - Retrieve Document Set [ITI-43]

Ces transactions peuvent également être utilisées dans le cadre du dossier électronique du patient (DEP).

6.2 Gestion des métadonnées

Comme mentionné précédemment dans les recommandations concernant le mécanisme de transport et en relation avec le dossier électronique du patient, il est fortement recommandé d'harmoniser les métadonnées relatives aux documents établis avec CDA-CH V2.

Plusieurs des informations au l'en-tête(Header) du document HL7 CDA sont aussi présent dans les métadonnées d'une registre IHE XDS.b. Indépendant du cas ou l'environnement IHE XDS.b se trouve au cadre du LDEP ou il s'agit d'un autre type d'Affinity Domain (Communauté ou Community) les informations peuvent être extraits du l'en-tête CDA. Il faut noter que les informations au registre XDS.b peuvent être changé selon le profil IHE 'XDS Metadata Update'. Les métadonnées dans le document CDA restent inchangé.

eHealth Suisse a publié des recommandations d'implémentation pour le mapping de les métadonnées et l'utilisation de domaines de valeur ici: Metadaten gemäss EPDV.

6.3 Gestion des versions originales et des documents PDF

La numérisation représente un important progrès permettant de réaliser de nombreuses améliorations, surtout dans les processus interentreprises.

Du point de vue d'un hôpital, par exemple, la liste des médicaments qu'un patient prend à sa sortie constitue en principe un chapitre à la fin du rapport de sortie d'hôpital. Pourtant, cette liste est particulièrement importante pour l'instance qui assure le suivi du patient. Il est donc logique d'utiliser, pour présenter le rapport de sortie d'hôpital au sein de l'hôpital et auprès de l'instance de suivi (ex. médecin traitant, service de soins à domicile ou clinique de réadaptation), différents stylesheets sur le même document CDA. De cette manière, le chapitre concernant les médicaments à la sortie de l'hôpital peut se trouver en tête de liste pour l'instance de suivi. Les professionnels de santé qui assurent le suivi du patient après l'hôpital trouvent ainsi en premier les informations importantes.

Les rapports de laboratoire constituent un autre exemple : il est important pour les laboratoires que le destinataire puisse recevoir l'original d'un rapport de laboratoire, car les documents structurés électroniquement (souvent échangés sous la forme de messages HL7 V2) ne sont pas toujours correctement reproduits dans tous les systèmes récepteurs. Les laboratoires ne peuvent toutefois assumer la responsabilité de ces reproductions erronées : ce constat ne vaut pas uniquement pour les messages HL7 V2, mais aussi pour les résultats de laboratoire reposant sur HL7 CDA (p. ex. au format d'échange eLaborbefund – CDA-CH-LREP).

La responsabilité d'une utilisation correcte des informations de santé dans un document CDA ne peut donc être assumée exclusivement par l'expéditeur (auteur/signataire), le destinataire doit également porter sa part de responsabilité. Le signataire légal d'un document CDA ne peut en aucun cas être tenu pour responsable si certaines informations sont présentées différemment, de manière erronée ou pas du tout, en raison de l'utilisation d'un autre stylesheet.

Il ne s'agit toutefois pas de renoncer pour cette raison à utiliser des documents CDA, mais bien d'exploiter les avantages qu'ils offrent (comme décrit plus haut sur l'exemple de la liste de médicaments), sans toutefois créer de nouveaux écueils en termes de responsabilité.

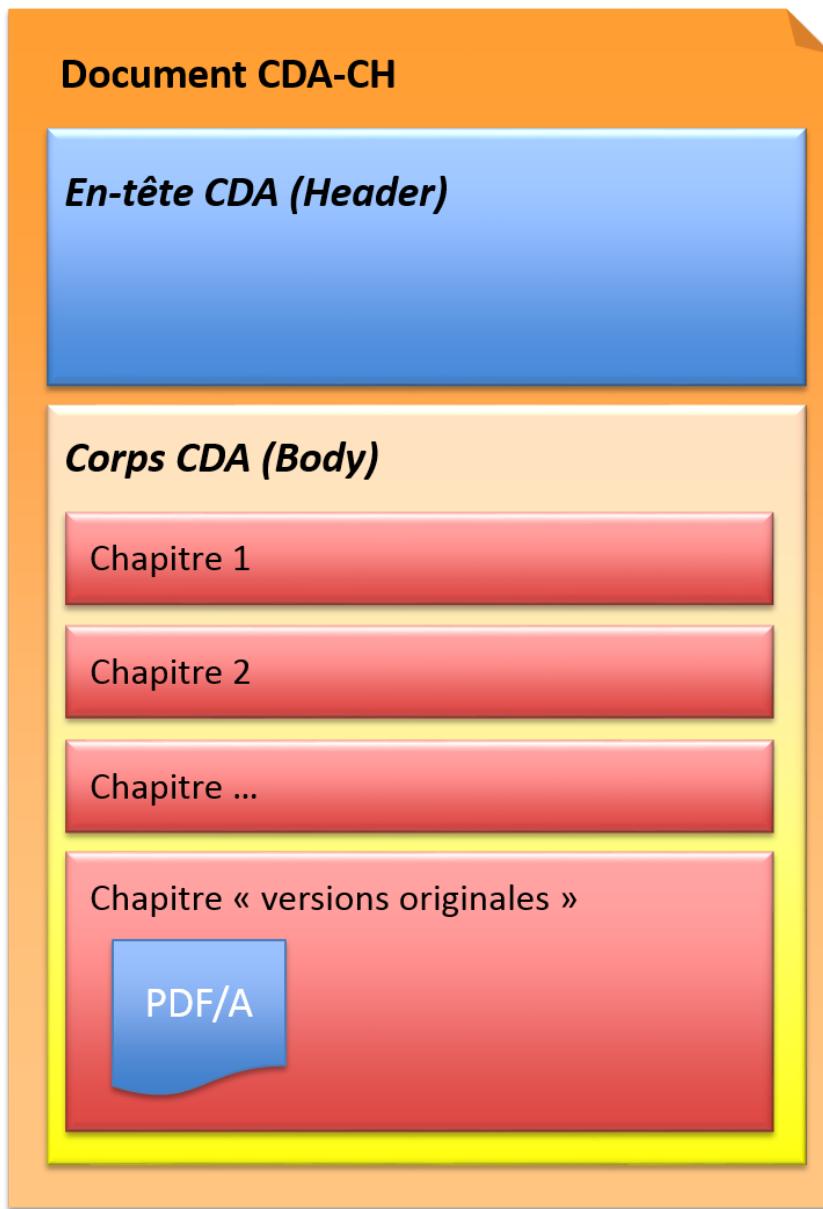

Les recommandations suivantes ont été émises pour ces raisons.

6.3.1 Recommandation en matière de gestion des versions originales

- Dans un document CDA, il convient, si l'auteur du document le considère comme important ou lorsque cela est nécessaire dans un cas d'application précis, de reproduire la version originale du document telle que le signataire légal l'a vue au moment de signer. Le créateur d'un document au format CDA-CH V2 est donc libre d'intégrer ou non la présentation origina-

le dans son document CDA. Une précision à cet effet peut être mentionnée dans les formats d'échange découlant de CDA-CH V2.

- Si la version originale doit être intégrée, elle doit l'être sous la forme d'un docuemnt PDF dans les documents HL7 CDA (voir [document CDA modèle avec version originale au format PDF/A intégrée](#)).

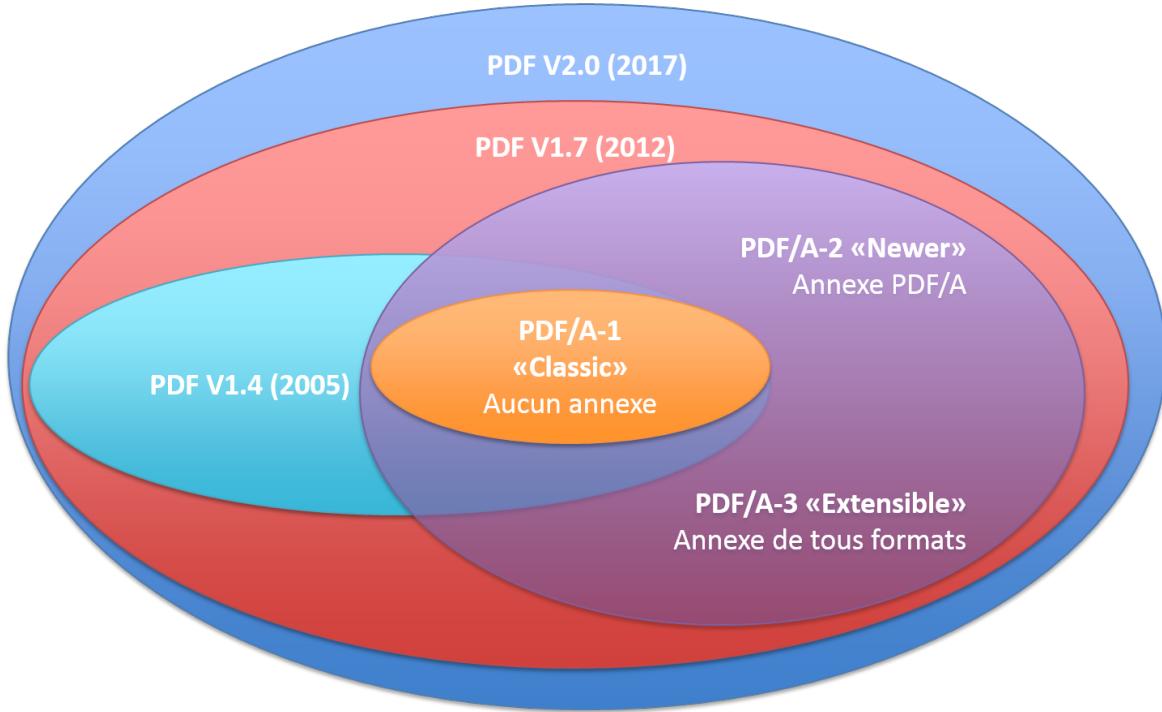

[Illustration 4] Reproduction de la version originale au moyen d'un document PDF/A intégré dans le corps CDA

6.3.2 Recommandation d'utilisation des documents PDF

- Si les documents PDF sont intégrés ou référencés dans un document CDA, ils doivent l'être en format PDF/A. Ce principe s'applique à toutes les versions originales, mais aussi à d'éventuelles annexes ou autres documents référencés.
- Il faut pour ce faire utiliser le format PDF/A-1, car il repose sur la version PDF 1.4 et est peut donc aussi être généré et exploité par des systèmes plus anciens.
- Le degré de conformité PDF/A-1a doit être respecté, car tout document qui répond à la norme plus stricte PDF/A-1a est aussi compatible avec la version moins stricte PDF/A-1b.

- Les documents en format PDF/A-2 ou PDF/A-3 ne doivent pas être utilisés en relation avec la spécification CDA-CH. En lieu et place, les annexes spécifiées PDF/A-2 ou PDF/A-3 doivent être intégrées ou référencées comme annexes indépendantes dans CDA.

[Illustration 5] Formats PDF/A

6.3.3 Remarques et justification des recommandations ci-dessus

- L'intégration d'éléments multimédia (donc aussi de documents PDF) dans un document HL7 CDA se fait sur la base d'un code [Base64](#), afin que les flux de données binaires puissent eux aussi être intégrés en XML.
- Il existe aussi la possibilité de transférer des documents CDA et PDF séparément en tant que documents indépendants et de créer un lien entre eux, ou d'intégrer le document CDA comme élément XML dans le document PDF. Ces variantes ne sont toutefois pas évoquées ici.

Raisons de choisir d'intégrer les CDA en PDF :

- du point de vue du fabricant du logiciel, il est important pour la transposition de la version originale qu'une seule des multiples variantes ne doive être implémentée (afin d'éviter les interfaces n*m).
- les documents HL7 CDA sont des documents XML. XML peut être enregistré dans les systèmes de bases de données courants en tant que type de données indépendant, puis être analysé à nouveau de manière structurée à un stade ultérieur moyennant une recherche sur la base de données.
- PDF/A est indispensable :
 - un document PDF ordinaire ne se prête pas à un archivage à long terme, car des informations importantes (telles que le type de police) ne doivent pas forcément être intégrées au document, même si elles sont indispensables à une représentation identique sur un autre ordinateur.
 - tant la notice [Formats de fichiers archivable](#) des Archives fédérales que l'[annexe 2 de l'Ordonnance du DFI sur le dossier électronique du patient \(conditions de certification pour communautés et communautés de référence\)](#) requièrent par conséquent le format PDF/A.
 - les formats PDF (A-1, A-2, A-3) ne sont ni dissociables ni cumulables les uns aux autres. Pour un grand nombre de validateurs PDF courants, il faut par conséquent définir

le degré de conformité PDF avant validation. Si plusieurs versions PDF étaient par conséquent autorisées, la validation devrait donc être exécutée plusieurs fois pour chaque document PDF intégré.

- la recommandation ci-dessus selon le degré de conformité PDF/A-1a remplit de son côté les conditions des Archives fédérales et de la LDEP et il existe par ailleurs suffisamment de composants de logiciel pour générer des documents PDF sur le marché qui répondent à ces normes.

6.4 Gestion des identifiants

Les recommandations suivantes concernant les identifiants s'appuient sur les prescriptions légales en vigueur en Suisse et il s'agit de considérer que la version CDA-CH V2 est utilisée dans le cadre de différentes lois (ex. LDEP^[Remarque 2], LEp^[Remarque 3], LAI^[Remarque 4], LAVS^[Remarque 5], LAMal^[Remarque 6], etc.), mais aussi dans le cadre des échanges bilatéraux entre les professionnels de la santé et les institutions de soins. Les recommandations ci-après concernant les identifiants respectent ces directives générales. Aucune autre directive n'est formulée dans CDA-CH V2. Elles peuvent éventuellement être mentionnées dans les formats d'échange découlant de CDA-CH V2.

6.4.1 Recommandation en matière de gestion de l'identifiant du patient

Les identifiants suivants du patient doivent être utilisés dans les documents CDA-CH V2 :

- tous les identifiants locaux des systèmes primaires.
- identification patients univoque dans le Master Patient Index d'une communauté (MPI-PID).

Les identifiants suivants du patient ne peuvent être utilisés dans les documents CDA-CH V2 qu'après vérification des principes légaux :

- numéro AVS (numéro d'assurance sociale)
Ne doit pas figurer lors de l'enregistrement du document dans le DEP. En dehors du DEP, les articles 50d et 50e LAVS fixent le cadre général des prescriptions légales pour l'utilisation systématique du numéro AVS. Celles-ci varient en fonction du type d'organisation et de ses activités. Ainsi, selon la LAMal, les prestataires peuvent utiliser le numéro AVS dans certains cas précis. Il incombe à l'organisation seule de nommer les bases légales déterminantes.
- numéro d'identification du patient (EPR-SPID)
Celui-ci est attribué par la CdC^[Remarque 7] à l'ouverture du dossier du patient dans le cadre de la LDEP et peut être utilisé uniquement, selon l'art. 6 LDEP, lorsqu'une base légale formelle le prévoit et que les personnes autorisées et le but de l'utilisation sont définis.

6.4.2 Recommandation en matière de gestion des identifiants des professionnels de la santé et institutions de soins

Les identifiants suivants des professionnels de la santé et des institutions de soins doivent être utilisés dans les documents CDA-CH V2 :

- Tous les identifiants locaux des systèmes primaires.
- Identification claire des professionnels de la santé et des institutions de soins, et groupes de professionnels de la santé dans le Healthcare Provider Directory d'une communauté (HPD-ID) :
 - le GLN est autorisé et particulièrement recommandé pour les professionnels de la santé et les institutions de soins.
Remarque : dès le 15.04.2018, le GLN sera contraignant pour tous les professionnels de la santé dans le cadre de la LDEP.

- pour les groupes de professionnels de la santé, c'est en particulier l'OID, tel qu'il figure dans le supplément 1 de l'annexe 5 de l'ODEP-DFI (adaptations nationales), qui est permis et recommandé.

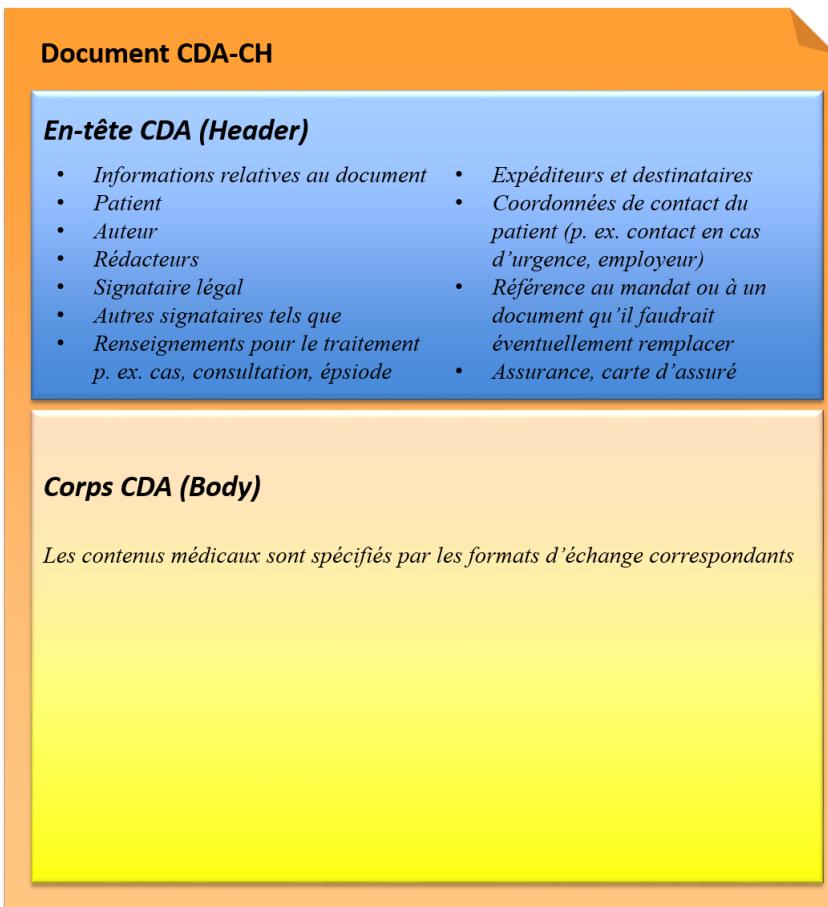

Les identifiants suivants pour les professionnels de la santé et les institutions de soins ne doivent pas être utilisés dans les documents CDA-CH V2 :

- numéro AVS (numéro d'assurance sociale)
- numéro d'identification du patient (EPR-SPID)

7 Spécification (normative)

7.1 Synthèse simplifiée de la structure CDA

La structure précise du document CDA est décrite en détail aux chapitres suivants. Nous proposons ici aux lecteurs pressés un résumé très simplifié des éléments constituant la présente spécification :

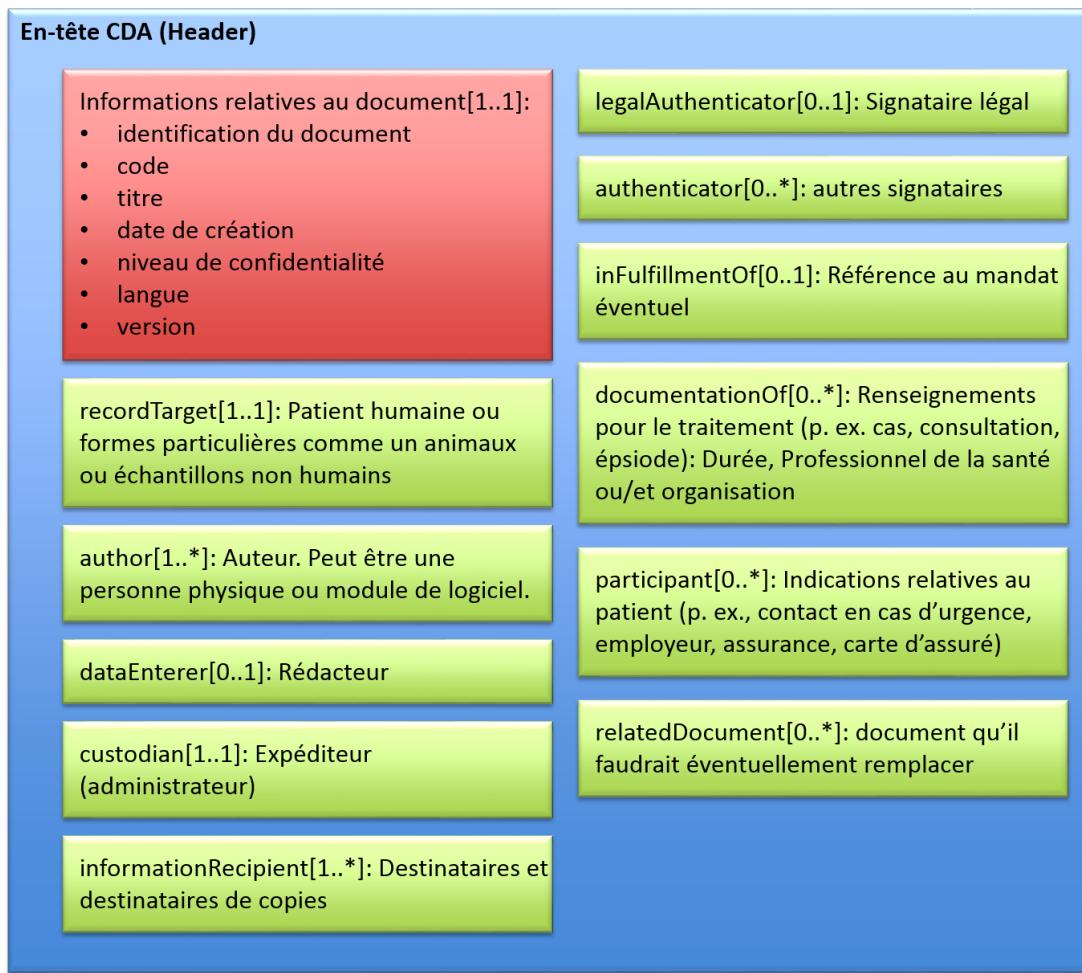

[Illustration 6] Contenu d'un document CDA

Les points énumérés et les illustrations proposées dans ce chapitre (sous-chapitres compris) contiennent des représentations simplifiées du contenu du document et montrent le contenu du document CDA sous forme de symboles.

7.1.1 En-tête CDA (header)

- Informations relatives au document (identification du document, code, titre, date de création, niveau de confidentialité, langue, version)
- Indications relatives au patient (identification du patient, nom, adresse, date de naissance, lieu de naissance, sexe, état civil, religion, compétences linguistiques), ou relatives aux échantillons non humains.
- Personnes intervenant sur le document : auteurs, rédacteurs
- Signataire légal, autres signataires tels que, par exemple, responsables de validation clinique
- Expéditeurs (administrateurs)
- Destinataires, y compris les éventuels destinataires de copies
- Coordonnées de contact du patient (p. ex., contact en cas d'urgence, employeur, assurance, carte d'assuré)

- Référence au mandat ou à un document qu'il faudrait éventuellement remplacer

[Illustration 7] *Données administratives dans l'en-tête CDA (header)*

7.1.2 Corps CDA (body)

Cette spécification ne soumet pas le corps CDA (body) à des normes. Les contenus médicaux du corps CDA (body) sont spécifiés par les formats d'échange correspondants.

7.2 Généralités

Un document créé selon la présente spécification est un document HL7 CDA et constitue ainsi un objet d'information défini et complet qui peut contenir des textes, des images et d'autres éléments multimédia. Les documents CDA renseignent sur l'état de santé d'un patient à un moment donné. Ils contiennent des données administratives (en-tête ou header) et médicales (corps ou body) et sont codés en eXtensible Markup Language (XML).

La spécification normative définit le document CDA-CH 2017 (specification)/fr comme modèle HL7 CDA, qui détermine des précisions helvétiques pour l'en-tête CDA. Les documents produits de cette manière sont entièrement compatibles avec la norme internationale HL7 CDA R2 (édition normative 2005) et donc interopérables à l'échelle internationale.

Cette spécification a pour objectif de permettre aux producteurs de logiciels d'implémenter leurs systèmes pour le traitement d'informations dans l'en-tête CDA sans prendre en compte l'émetteur et le récepteur. La présente spécification a été modélisée dans ART-DECOR, qui permet en outre de générer des règles Schematron pour valider de manière automatisée et harmonisée les documents CDA.

7.2.1 Mots-clés

Dans la spécification normative, les obligations sont indiquées à l'aide de mots-clés toujours écrits en lettres majuscules. Cf. également [ELGA Généralités], ch. 4.1 ou RFC 2119.

DOIT (angl. MUST ou SHALL) désigne une indication qui doit impérativement être respectée. Correspond aux critères de conformité [R] et [M].

NON AUTORISÉ (angl. NOT PERMITTED) désigne une interdiction qui doit impérativement être respectée. Correspond au critère de conformité [NP].

DEVRAIT ou **RECOMMANDÉ** (angl. SHOULD) désigne une recommandation pragmatique. Il est souhaitable et recommandé que la demande soit implémentée, mais il peut y avoir des raisons pour les références celle-ci n'est pas concrétisée. Correspond au critère de conformité Requis [R]. Si aucune valeur ne peut être spécifiée, nullFlavor DOIT être spécifié.

PEUT ou **OPTIONNEL** (angl. MAY, OPTIONAL). L'implémentation de la demande est optionnelle, elle peut aussi ne pas être concrétisée sans obligation de fournir une raison valable. Correspond au critère de conformité [O].

7.2.2 Optionalité

Le tableau suivant définit l'utilisation d'éléments contraignants, recommandés et optionnels ainsi que les cardinalités y relatives, utilisation de « nullFlavor » comprise. La définition suivante a été reprise du tableau « E.4.2.2.1-1: Data Element Optionality Constraints » du document « IHE Technical Frameworks General Introduction, Appendix E: Standards Profiling and Documentation Conventions, Revision 1.0, July 1, 2014 » et complété avec l'élément [NP].

Critères de conformité	Cardinalités possibles	Utilisation de nullFlavor	Description
[M]	1..1	NON AUTORISÉ	L'élément DOIT être indiqué avec une « véritable » valeur correcte.
	1..*		nullFlavor ou valeurs « Factices » : NON AUTORISÉ.
[NP]	0..0	NON AUTORISÉ	L'élément est NON AUTORISÉ.
[R]	1..1	PEUT être utilisé	L'élément DOIT être disponible dans l'instance.
	1..*		L'utilisation de nullFlavor est requise si l'information n'est pas connue. Valeurs « factices » : NON AUTORISÉ.
[O]	0..1	PEUT être utilisé	L'élément est OPTIONNEL. L'émetteur peut mentionner l'élément. Les éléments optionnels vides ne sont pas autorisés si aucun nullFlavor n'est utilisé.
	0..*		
[C]	[N/A]	[N/A]	Critère de conformité CONDITIONNEL. La conformité de l'élément varie en fonction des autres élé-

		ments, situations ou états. Les dépendances concrètes sont à chaque fois signalées.
--	--	---

[Tableau 2] *Notations au document*

7.2.3 nullFlavor

Lorsqu'une valeur n'est pas connue, il est possible de préciser le motif du manque d'indications en utilisant le code nullFlavor selon "7.3.6.4 HL7 NullFlavor", là où cela est autorisé conformément au tableau ci-dessus. Si un nullFlavor est utilisé, AUCUN attribut supplémentaire différent de xsi:type n'est permis.

7.2.4 Hiérarchie du guide d'implémentation

La présente spécification se base sur les principes suivants selon la hiérarchie suivante :

1. [HL7 Version 3](#)
2. [HL7 Clinical Document Architecture, Release 2.0](#)
3. Normes eCH
 1. [Adresses postales eCH-0010, Version 7.0](#)
 2. [Norme pour données personnelles eCH-0011, Version 8.1](#)
4. [Législation relative au dossier électronique du patient \(LDEP\)](#)
 1. [Annexe 3 de l'ordonnance du DFI sur le dossier électronique du patient \(métadonnées\), valable dès le 15.4.2017](#)
 2. [Annexe 4 de l'ordonnance du DFI sur le dossier électronique du patient \(formats d'échange\), version pour la consultation](#)

7.2.5 Acteurs et transactions

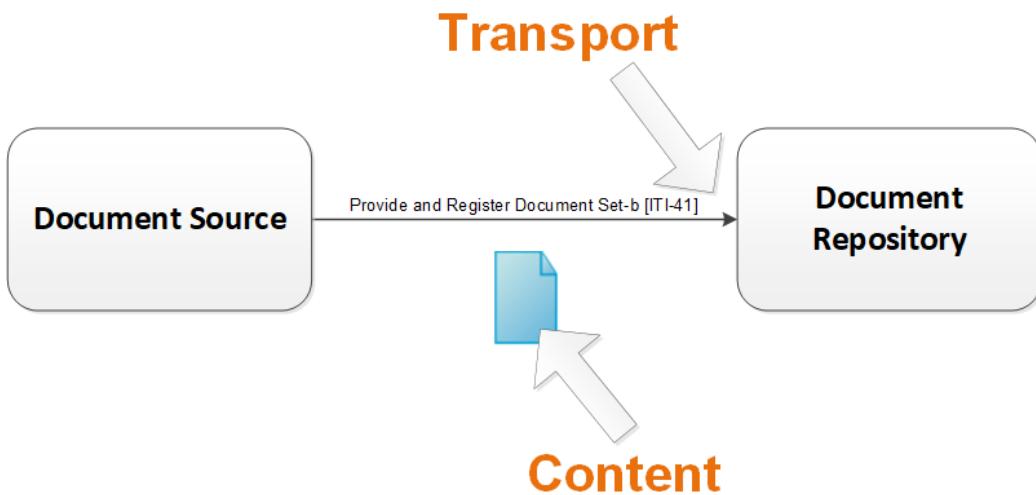

Le graphique suivant montre les acteurs et transactions IHE qui peuvent être combinés avec la présente spécification. Il souligne ainsi que les acteurs impliqués peuvent élaborer, échanger et modifier un document sur la base de CDA-CH.

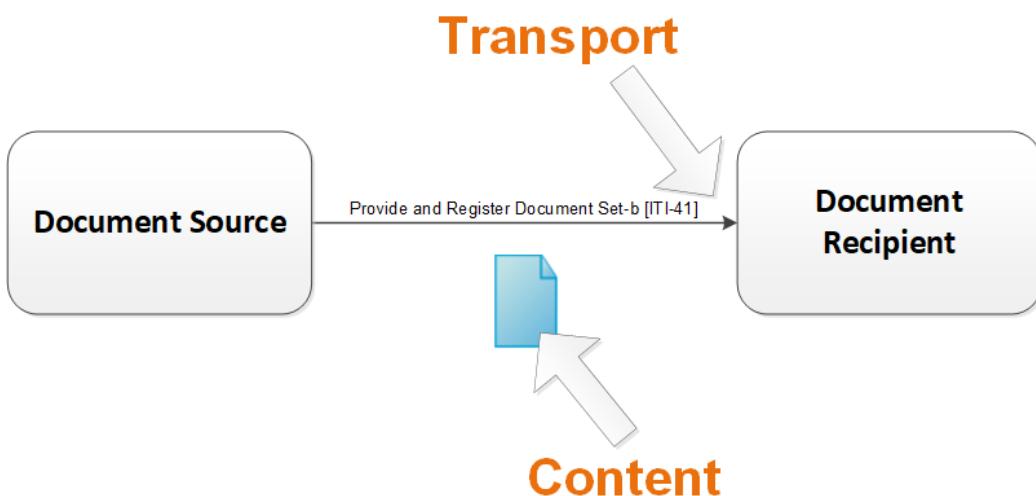

[Illustration 8] *Acteurs share content selon IHE*

IHE désigne la mise en œuvre dans les différents profils de contenu avec les profils d'intégration IHE XDS.b, XDR, XDM.

Les profils d'intégration IHE XDS et XDR réalisent l'interaction share content avec la transaction IHE provide and register document set-b [ITI-41], mais nomment les acteurs différemment :

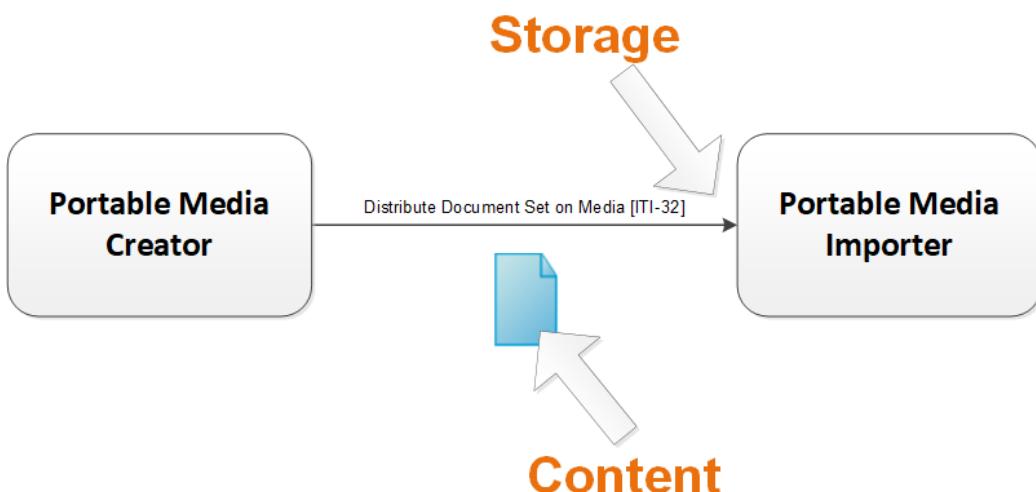

[Illustration 9] *Acteurs et transactions share content (concret pour XDS)*

[Illustration 10] *Acteurs et transactions share content (concret pour XDR)*

Le profil d'intégration IHE XDM réalise l'interaction share content avec la transaction IHE distribute document set on media [ITI-32] :

[Illustration 11] *Acteurs et transactions share content (concret pour XDM)*

Le contenu du document transmis (content) est identique dans toutes les transactions susmentionnées pour XDS, XDR et XDM, et est structuré selon le chapitre "7 Spécification (normative)". Pour une description précise des acteurs, transactions et contenus, nous renvoyons à la documentation IHE [IHE ITI TF-2b]^[1], chapitre « 3.32 Distribute Document Set on Media » et « 3.41 Provide and Register Document Set-b », car la transmission / l'enregistrement effectifs (share content) ne fait pas partie intégrante de la présente spécification.

7.3 CDA Struktur

7.3.1 CDA Document Level Templates

7.3.1.1 CDA-CH v2.0 - structuredBody

Id	2.16.756.5.30.1.1.10.1.9	Effective Date	2018-04-18
Status	Active	Version Label	2017
Name	CDA-CHv2.0-structuredBody	Display Name	CDA-CH v2.0 - structuredBody

Description

This document template is used as the primary base for CDA-CH exchange formats. All CDA-CH V2 derivatives, i.e. Swiss exchange formats SHALL use this template by specialisation.

It only specifies the usage of CDA header templates. It requires a structured CDA body, but does not define any CDA body rules. For CDA body rules, see the derived exchange formats.

<code>L h17:recordTarget</code>		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> ▪ Target patient The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient). ▪ Patient identifiers Multiple ids (patient identification number) MAY be declared. 	CDA-CH V2

					If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification. The patient identification number MUST be grouped with the OID of its assigning system. The patient identification number MUST be unique within the system identified by the OID. The declared OID MUST be found in one of the public OID registries, such as oid.refdata.ch (preferred), oid-info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc. OIDs that can't be found in a public OID registry are NOT ALLOWED. ▪ Pseudonymizing In special cases, the demographic data of the patient are not allowed to be transmitted or they have to be pseudonymized. While HL7 CDA or its derivatives like CDA-CH or Swiss exchange formats nevertheless require these elements in the XML structure, the affected values MUST be replaced by a nullFlavor of type "MSK" (masked), in order to support the required data format structure and simultaneously to shield the real data.

7.3.1.2 CDA-CH v2.0 - nonXMLBody

Id	2.16.756.5.30.1.1.10.1.12	Effective Date	2018-04-18
Status	● Active	Version Label	2017
Name	CDA-CHv2.0-nonXMLBody	Display Name	CDA-CH v2.0 - nonXMLBody

Description

This document template MAY be referenced or specialized for specific, not further described use cases. CDA-CH V2 derivatives, i.e. Swiss exchange formats SHOULDN'T use this template, as they better refer to the document level template requiring a structured body. It only specifies the usage of CDA header templates. It requires a non XML CDA body, but does not define any CDA body rules. For CDA body rules, see the derived exchange formats.

<i>Included</i>		1 ... 1	R	from 2.16.756.5.30.1.1.10.2.1 <i>Patient - recordTarget</i> (DYNAMIC)	
<code>h17:recordTarget</code>		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> ▪ Target patient The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient). ▪ Patient identifiers Multiple ids (patient identification number) MAY be declared. If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification. The patient identification number MUST be grouped with the OID of its assigning system. The patient identification number MUST be unique within the system identified by the OID. The declared OID MUST be found in one of the public OID registries, such as oid.refdata.ch (preferred), oid.info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc. OIDs that can't be found in a public OID registry are NOT ALLOWED. ▪ Pseudonymizing In special cases, the demographic data of the patient are not allowed to be transmitted or they have to be pseudonymized. While HL7 CDA or its derivatives like CDA-CH or Swiss exchange 	CDA-CH V2

				formats nevertheless require these elements in the XML structure, the affected values MUST be replaced by a nullFlavor of type "MSK" (masked), in order to support the required data format structure and simultaneously to shield the real data.

7.3.2 CDA Header Level Templates

Les CDA Header Level Templates ci-après sont présentés par ordre attendu de HL7 CDA R2 (2005) ou bien du XML Schema (POCD_MT000040.xsd) dérivé au document CDA. Car il n'y a pas un Template pour chaque élément au Header CDA ou il y a plusieurs Templates pour un élément, l'ordre ci-après est important:

1. realmCode: voir "7.3.2.1 Document_Realm"
2. typeId: valeur fixe définie par HL7 CDA R2 (2005), aucun Template CDA-CH.
3. templateId: voir "0 Document_Template_Ids_CDA-CH_V2"
4. id: voir "7.3.2.4 Document_Id"
5. code: voir "7.3.2.5 Document_Code"
6. title: Défini par des document dérivé de CDA-CH, aucun Template CDA-CH.
7. effectiveTime: valeur unique de la date d'émission du document CDA, aucun Template CDA-CH.
8. confidentialityCode: voir "7.3.2.6 Document_Confidentiality_Code"
9. languageCode: voir "7.3.2.7 Document_Language"
10. setId: voir "7.3.2.8 Document_Set_Id_and_Version_Number"
11. versionNumber: voir "7.3.2.8 Document_Set_Id_and_Version_Number"
12. recordTarget: voir "7.3.2.9 Patient_-recordTarget"

7.3.2.2 Document Template Ids CDA-CH v2.0 - nonXMLBody

Id	2.16.756.5.30.1.1.10.2.47	Effective Date	2018-04-18
Status	Active	Version Label	2017
Name	cdach_header_DocumentTemplateIdsCdaChv2.0-nonXmlBody	Display Name	Document Template Ids CDA-CH v2.0 - nonXMLBody

Description

CDA-CH V2 bases on HL7 CDA R2 (2005) and - by using this template - require a non XML body for specific, not further described use cases. CDA-CH V2 derivatives, i.e. Swiss exchange formats SHOULDN'T use this template, as they better refer to the document level template requiring a structured body. These SHALL define further template ids in their own separate templates.

Item	DT	Card	Conf	Description	Label
h17:recordTarget		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> ▪ Target patient The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient). ▪ Patient identifiers Multiple ids (patient identification number) MAY be declared. If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification. The patient identification number MUST be grouped with the OID of its 	CDA-CH V2

					assigning system. The patient identification number MUST be unique within the system identified by the OID. The declared OID MUST be found in one of the public OID registries, such as oid.refdata.ch (preferred), oid-info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc. OIDs that can't be found in a public OID registry are NOT ALLOWED.

7.3.3 CDA Section Level Templates

CDA-CH v2.0 émet, d'après les "2.4.3 Limites", des prescriptions normatives par rapport à l'en-tête CDA mais pas par rapport au corps CDA. C'est la raison pour laquelle aucun CDA Section Level Template n'est reproduit ici.

7.3.4 CDA Entry Level Templates

CDA-CH v2.0 émet, d'après les "2.4.3 Limites", des prescriptions normatives par rapport à l'en-tête CDA mais pas par rapport au corps CDA. C'est la raison pour laquelle aucun CDA Entry Level Template n'est reproduit ici. La réexploitation d'informations communément utilisables dans le corps CDA est cependant vivement recommandée, c'est pourquoi un certain nombre de modèles pour saisies CDA réutilisables figurent dans [ART-DECOR](#). Ces modèles peuvent être référencés ou spécialisés dans des formats d'échange. Au moment de rédiger le présent document concernant CDA-CH v2.0, les CDA Entry Level Templates suivants sont disponibles (d'autres pourront venir s'y ajouter par la suite) :

1. [Inability To Work Observation](#)
2. [Vital Signs Organizer](#)

Dans tous les cas, il incombe aux formats d'échange découlant de CDA-CH v2.0 de spécifier le contenu des saisies CDA.

7.3.5 Other CDA Templates

Les CDA Header Level Templates ci-après sont présentés par ordre alphabétique.

7.3.5.1 Address Information Compilation - eCH-0010

7.3.5.7 CDA-CH v2.0 Header Template Compilation

Id	2.16.756.5.30.1.1.10.9.36	Effective Date	2018-04-18
-----------	---------------------------	-----------------------	------------

Status	Active	Version Label	2017
Name	cdach_other_HeaderTemplateCompilation	Display Name	CDA-CH v2.0 Header Template Compilation

Description

CDA-CH V2 bases on HL7 CDA R2 (2005) and requires either a nonXMLBody or a StructuredBody. This circumstance is modeled in two separate templates but both MUST contain the same header templates. Therefore this template contains all header templates that are equal for all relevant document level templates. CDA-CH V2 derivatives, i.e. Swiss exchange formats MUST use this template by either reference or specialisation.

hl7:versionNumber	INT.NONNEG	1 ... 1	R	The versionNumber element MUST contain the value 1 for the very first version of that document. For later versions, the version number MUST be increased by 1 each.	CDA-CH V2
<i>Included</i>		1 ... 1	R	from 2.16.756.5.30.1.1.10.2.1 <i>Patient - recordTarget</i> (DYNAMIC)	
hl7:recordTarget		1 ... 1	R	<p>A human patient for whom this CDA document instance was created.</p> <ul style="list-style-type: none"> ▪ Target patient The HL7 CDA R2 (2005) standard allows multiple patients. In order to ensure that the information in a CDA document is unambiguously assigned to one and only patient, a CDA-CH V2 based document MUST contain exactly one patient. Special cases: In exceptional cases (e.g., new-born twins, both having jaundice), multiple documents MUST be created (all of the same content, but each with a unique patient). ▪ Patient identifiers Multiple ids (patient identification number) MAY be declared. If multiple ids are known, it is highly recommended to declare all known ids. Especially in cases where the CDA document instance is kind of an answer to a preceding order (independent of its data format), all ids specified by the ordering system SHALL be declared in the CDA document instance. This allows the receiver to assign its internal patient identification. The patient identification number MUST be grouped with the OID of its assigning system. The patient identification number MUST be unique within the system identified by the OID. The declared OID MUST be found in one of the public OID registries, such as oid.refdata.ch (preferred), oid-info.com, hl7.org/oid, www.dimdi.de/static/de/klassi/oid/, gesundheit.gv.at/OID_Frontend/ etc. 	CDA-CH V2

				OIDs that can't be found in a public OID registry are NOT ALLOWED.	
				<ul style="list-style-type: none"> Pseudonymizing In special cases, the demographic data of the patient are not allowed to be transmitted or they have to be pseudonymized. While HL7 CDA or its derivatives like CDA-CH or Swiss exchange formats nevertheless require these elements in the XML structure, the affected values MUST be replaced by a nullFlavor of type "MSK" (masked), in order to support the required data format structure and simultaneously to shield the real data.

7.3.5.8 Device Compilation with name

Id	2.16.756.5.30.1.1.10.9.21	Effective Date	2018-04-18
-----------	---------------------------	-----------------------	------------

Status	Active	Version Label	2017
Name	cdach_other_DeviceCompilationWithName	Display Name	Device Compilation with name
Description			
Reusable template wherever a device with required name is used in a CDA-CH V2 document. CDA-CH V2 derivatives, i.e. Swiss exchange formats MAY use this template by either reference or specialisation.			
A device is either a physical device (e.g. analyzer with which laboratory results are determined) or a software (e.g. laboratory information system, in which laboratory results are documented).			
Context	Pathname		
Label	CDA-CH V2		
Classification	Template type not specified

7.4 Directives pour la validation

7.4.1 Règles Schematron requises

Un set de règles Schematron doit être livré avec tous les formats d'échanges reposant sur CDA-CH V2 (2017). Celui-ci peut être généré à partir d'ART-DECOR. Les règles Schematron d'ART-DECOR reflètent toutes les vérifications de structure représentées dans le modèle (du type de données à la cardinalité). ART-DECOR ne peut toutefois transformer automatiquement en Schematron les règles commerciales importantes sous-jacentes à la description du modèle. De telles règles doivent être intégrées en complément au modèle ART-DECOR en tant que Schematron assert ou report.

Exemple :

Pour le rôle de l'auteur, il convient d'utiliser le Value Set selon ODEP, annexe 3 (métadonnées).

L'entrée '133932002' (Other Caregiver) doit toutefois être complétée par un texte en clair. Le Schematron assert suivant a été complété à cet effet dans les modèles Author et Performer :

Test: not(@code='133932002') or (originalText/text())

Message: Other Caregivers description MUST be declared in the originalText element.

7.4.2 Publication des règles Schematron

Les règles Schematron doivent être déposées auprès du groupe d'utilisateur HL7 Suisse pour publication officielle librement accessible dans le SourceForge Repository (ci-après SVN) prévu à cet effet. Le SVN Repository est géré par le groupe d'utilisateurs HL7 Suisse. Le comité technique du groupe d'utilisateurs HL7 Suisse est responsable du contenu du Repository et administre les droits d'écriture.

SVN Repository: <https://svn.code.sf.net/p/hl7ch/code/trunk/>

SourceForge Projekt: <http://www.sourceforge.com/projects/hl7ch>

7.4.3 Versionnement des règles Schematron

Le versionnement des règles Schematron incombe à l'éditeur d'un format d'échange CDA-CH. Il est possible d'indiquer une version principale et une sous-version par fichier sous la forme d'un entier naturel (Major.Minor). Exemple : 2.11

Le numéro de révision est attribué par le SVN Repository.

7.4.4 Continuité

Les modèles de document (Templates, sets de règles Schematron) des formats d'échange CDA-CH doivent être implémentés de sorte à être compatibles avec les versions antérieures. Il s'agit autant que possible d'éviter toute rupture de rétrocompatibilité. Si une telle rupture est inévitable, elle est autorisée uniquement dans les versions principales (nouvelle Major Version).

Remarque : CDA-CH V2 (2017) n'est pas rétrocompatible à 100% par rapport à CDA-CH V1.2 (2009).

7.4.5 Métadonnées pour les règles Schematron

L'éditeur d'un format d'échange CDA-CH doit déclarer une catégorie principale et une sous-catégorie pour les règles Schematron. Ces indications sont utilisées pour la structure arborescente du SVN Repository et ne peuvent comporter plus de 20 caractères. Les caractères spéciaux autorisés sont _ et -, et les espaces ne sont pas admis. Ces indications doivent être mentionnées clairement dans la branche en question du SVN Repository. En cas de litige, c'est le comité du groupe d'utilisateurs HL7 Suisse ou un organe nommé à cet effet par le comité qui tranche définitivement. Exemples :

- Société\Produit

- Projet\Formulaire

7.4.6 Chemins d'accès dans les règles Schematron

Si des Entities réutilisables sont référencées dans les fichiers Schematron, le chemin de navigation doit être indiqué au moyen chemins d'accès relatifs et correspondre à la structure de répertoire de SVN Repository.

7.4.7 Arborescence dans le SVN Repository

La structure arborescente du SVN Repository se présente comme suit :

schematrons/catégorie principale/sous-catégorie/version/

En dessous de cette catégorie, l'éditeur d'un modèle CDA peut définir librement ses sous-répertoires.

Exemples :

- schematrons/HL7.ch/CDA-CH/v1.2/cda-ch.sch
- schematrons/HL7.ch/CDA-CH/v2.0/cda-ch.sch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-dis.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-mtp.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-padv.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-pml.ch
- schematrons/eHealthSuisse/eMedication/v1.0/cda-ch-emed-pre.ch

8 Validation, technologies et outils

Ce domaine thématique a été déplacé dans un document séparé à des fins de réutilisation dans différents formats d'échange basés sur CDA-CH. Se référer ici au Whitepaper [CDA-CH - Validation, technologies et outils](#).

En outre, la spécification [CDA-CH-II \(2011\)](#) contient un didacticiel Schematron et des informations sur les meilleures pratiques.

Note: Bien que le CDA-CH-II (2011) soit aboli avec l'approbation de CDA-CH V2 (2017), la lecture vaut la peine:

- Chapitre "8 Tutoriel Schematron"
- Chapitre "9 Les meilleures pratiques Schematron"

8.1 Document d'exemple et règles schematron

Des exemples de documents et des règles Schematron peuvent être consultés en cliquant sur les liens suivants dans l'Open Source Repository du groupe d'utilisateurs HL7 Suisse (HL7 Benutzergruppe Schweiz) :

- [règles schematron](#)
- Exemples de documents :
 - Exemple de cas CDA-CH V2 « Prothèse de la hanche »
 - [Allemand](#)
 - [Français](#)
 - CDA-CH V2 Best practices
 - [Anglais](#)
 - [Autres exemples de documents](#)

Remarque : ils sont basés en partie sur CDA-CH V1.2 (2009) ou CDA-CH-II (2011) et n'ont pas fait l'objet d'une migration complète vers CDA-CH V2 (2017).
